6.1 ♣ Concepts: Define and draw the moment of a force

Write the *definition* for the moment of force  $\vec{F}^Q$  applied to point  $Q$  about point  $O$ . Draw a sketch with *each* part of your definition clearly labeled.

Result:

$$\vec{M}^{\vec{F}^Q/O} \triangleq \vec{r}^{Q/O} \times \vec{F}^Q$$

6.2 ♣ Moment vs. torque (refer to Section 19.5)

Consider the various sets  $S$  of forces, their resultants  $\vec{F}^S$ , and moments about points  $O$ ,  $P$ , and  $Q$ . This example shows how to easily determine whether a moment is a torque.<sup>1</sup>

$S$	$\vec{F}^S$	$\vec{M}^{S/O}$	$\vec{M}^{S/P}$	$\vec{M}^{S/Q}$	$\vec{M}^{S/O} \stackrel{?}{=} \vec{M}^{S/P} \stackrel{?}{=} \vec{M}^{S/Q}$	Moment is torque?
A	$10 \hat{n}_y$	$50 \hat{n}_z$	$\vec{0}$	$-30 \hat{n}_z$	Yes/ <b>No</b>	Yes/ <b>No</b>
B	$\vec{0}$	$-30 \hat{n}_z$	$-30 \hat{n}_z$	$-30 \hat{n}_z$	<b>Yes</b> /No	<b>Yes</b> /No
C	$-2 \hat{n}_y$	$2 \hat{n}_z$	$12 \hat{n}_z$	$18 \hat{n}_z$	Yes/ <b>No</b>	Yes/ <b>No</b>
D	$\vec{0}$	$2 \hat{n}_z$	$2 \hat{n}_z$	$2 \hat{n}_z$	<b>Yes</b> /No	<b>Yes</b> /No

6.3 ♣ Moment and torque concepts

75% All torques are moments.

61% All moments are torques.

61% The moment of a couple about a point  $O$  is equal to the moment of the couple about any other point  $P$

**True**/False

True/**False**

**True**/False

<sup>1</sup>Since  $\vec{T}^S \triangleq \vec{M}^{S/O}$  if  $\vec{F}^S = \vec{0}$  (point  $O$  is *any* point), the *moment* is a *torque* if  $\vec{F}^S = \vec{0}$  (it is that simple).

### 6.4 ♣ Drawing couples

Each figure below shows a single force  $\vec{F}$  applied tangentially to a point on the periphery of a circle. Complete each figure by drawing couples consisting of 2, 3, and 4 forces, respectively, so:

- Each force has magnitude  $|\vec{F}|$  and is applied at distinct points on the circle's periphery
- Each force is directed **tangent** to the circle's periphery
- The set of forces create a couple with non-zero torque

Couple with two forces

Couple with three forces

Couple with four forces

### 6.5 ♣ Moments of forces about various points

Consider the six figures below, each which contain a set of forces. Circle the figure(s) in which the moment of its set of forces about points  $O$ ,  $P$ , and  $Q$  all are equal, i.e.,

$$\text{Moment around point } O = \text{Moment around point } P = \text{Moment around point } Q$$

Note: All forces have the same magnitude. Forces that are not horizontal or vertical are  $30^\circ$  from vertical.
