

# Contents

Statics and dynamics – what does it do for us? . . . . .	i
Newton’s three laws . . . . .	ii
Methods for forming equations of motion . . . . .	iii
<b>1 Math review</b>	<b>1</b>
1.1 Unit systems - SI and U.S. . . . .	1
1.2 Geometry: Ancient Euclid and modern vectors . . . . .	2
1.3 Circles and their properties . . . . .	2
1.4 Triangles and ratios of their sides (sine, cosine, tangent) . . . . .	2
1.4.1 Properties of sine and cosine and useful trigonometric formulas . . . . .	3
1.4.2 Sine and cosine as functions (Euler, circa 1730) . . . . .	4
1.4.3 The amplitude-phase formulas for sine and cosine . . . . .	4
1.4.4 The function $\text{atan2}(y, x)$ . . . . .	4
1.5 Types of scalars: Variable, Specified, Constant . . . . .	5
1.6 Differentiation . . . . .	5
1.6.1 Definition of an ordinary derivative of a scalar function . . . . .	5
1.6.2 Definition of a partial derivative of a scalar function . . . . .	5
1.6.3 Definition of the differential of an independent variable and scalar function . . . . .	6
1.6.4 Definition of the total derivative of a scalar function . . . . .	6
1.6.5 Short table of derivatives frequently encountered in engineering . . . . .	6
1.6.6 Example: Partial and ordinary differentiation . . . . .	7
1.6.7 Good product rule for differentiation (for scalars, $\vec{v}$ ectors, matrices, . . .) . . . . .	7
1.6.8 Quotient rule for derivatives: Use exponents and the product rule . . . . .	7
1.6.9 Chain rule for derivatives . . . . .	7
1.6.10 Implicit differentiation: A useful tool for calculating derivatives . . . . .	7
1.7 Integration and a short table of integrals . . . . .	8
1.8 Minimization and maximization (optimization) . . . . .	9
1.9 Solutions of <i>polynomial</i> equations (roots) . . . . .	11
1.10 Continuous solutions of <i>nonlinear</i> algebraic equations . . . . .	11
<b>2 Vectors</b>	<b>13</b>
2.1 Examples of scalars, vectors, and dyadics . . . . .	13
2.2 Definition of a vector . . . . .	14
2.3 Zero vector $\vec{\mathbf{0}}$ and its properties . . . . .	14
2.4 Unit $\hat{v}$ ectors . . . . .	15
2.5 Equal vectors ( = ) . . . . .	15
2.6 Vector addition ( + ) . . . . .	15
2.7 Vector multiplied or divided by a scalar ( * or / ) . . . . .	16
2.8 Vector negation and subtraction ( - ) . . . . .	16
2.9 Words: Vectors vs. column matrices in the context of $\vec{\mathbf{F}} = m\vec{\mathbf{a}}$ . . . . .	16
2.10 Vector dot product ( $\cdot$ ) . . . . .	17

2.10.1	Properties of the dot-product $(\cdot)$ . . . . .	17
2.10.2	Uses for the dot-product $(\cdot)$ . . . . .	17
2.10.3	Special case: Dot-products with orthogonal unit vectors . . . . .	18
2.10.4	Examples: Vector dot-products $(\cdot)$ . . . . .	18
2.10.5	Dot-products to change vector equations to scalar equations (see Hw 1.31) . . . . .	18
2.10.6	Optional: Special case of $\vec{\mathbf{a}} \cdot \vec{\mathbf{b}}$ as matrix multiplication $a^T b$ (orthogonal vectors) . . . . .	18
2.11	Vector cross product $(\times)$ . . . . .	19
2.11.1	Properties of the cross-product $(\times)$ . . . . .	19
2.11.2	Uses for the cross-product $(\times)$ . . . . .	19
2.11.3	Determinants and cross-products (with right-handed unit vectors) . . . . .	20
2.11.4	Optional: Cross product as skew-symmetric matrix multiplication . . . . .	20
2.12	Scalar triple product $(\cdot \times \text{ or } \times \cdot)$ . . . . .	21
2.12.1	Scalar triple product and the volume of a tetrahedron . . . . .	21
2.12.2	$(\times \cdot)$ to change vector equations to scalar equations (see Hw 1.31) . . . . .	21
<b>3</b>	<b>Position vectors and vector geometry</b> . . . . .	<b>23</b>
3.1	Position of a point (or particle) (see examples in Hw 3) . . . . .	23
3.2	Distance (also see speed and distance-traveled in Section 10.8) . . . . .	24
3.3	Example: Cable lengths, angles, surface area (orthogonal walls) . . . . .	25
3.4	Optional: Proof of law of cosines and law of sines with vectors . . . . .	26
3.5	Optional: Proof of sine addition formula with vector cross-products . . . . .	26
3.6	Optional: Proof of cosine addition formula via sine addition formula . . . . .	26
<b>4</b>	<b>Vector basis</b> . . . . .	<b>27</b>
4.1	What is a vector basis? . . . . .	27
4.2	Rigid and non-rigid bases . . . . .	28
4.3	Non-orthogonal basis . . . . .	28
4.4	Creating various 3D bases from two non-parallel vectors . . . . .	28
4.5	Concept: What is the vector vs. how is it expressed . . . . .	29
4.6	Expressing a vector in terms of basis $\vec{\mathbf{a}}_1, \vec{\mathbf{a}}_2, \vec{\mathbf{a}}_3$ . . . . .	30
4.7	Optional: Coordinate system vs. vector bases . . . . .	31
4.8	Optional: Rigid frame and transformation matrices . . . . .	32
<b>5</b>	<b>Rotation matrices I</b> . . . . .	<b>33</b>
5.1	Uses for the rotation matrix ${}^aR^b$ (for geometry, statics, motion analysis, stress . . . . .)	33
5.2	Rotation matrices and matrix multiplication . . . . .	34
5.3	Rotation matrices - who cares? . . . . .	34
5.4	Simple rotation matrix examples . . . . .	35
5.4.1	Example: Calculating angles between unit vectors $\hat{\mathbf{a}}_x, \hat{\mathbf{a}}_y, \hat{\mathbf{a}}_z$ and $\hat{\mathbf{b}}_x, \hat{\mathbf{b}}_y, \hat{\mathbf{b}}_z$ . . . . .	35
5.4.2	Example: Calculation of rotation matrix inverse (use transpose) . . . . .	35
5.4.3	Example: Rotation matrix for express, dot, and cross . . . . .	35
5.5	Forming rotation matrices and matrix multiplication . . . . .	36
5.5.1	Example: Forming the simple rotation matrix ${}^aR^n$ . . . . .	36
5.5.2	Hug rule (a pattern for quickly forming simple rotation matrices) . . . . .	36
5.5.3	Example: Forming the simple rotation matrix ${}^bR^a$ . . . . .	37
5.5.4	Example: Rotation matrix multiplication to form ${}^bR^n = {}^bR^a * {}^aR^n$ . . . . .	37
5.6	What is an angle? . . . . .	38
5.7	Optional: Proofs . . . . .	39
5.7.1	Proof that a rotation matrix is orthonormal . . . . .	39
5.7.2	Proof of relationship between $\hat{\mathbf{b}}_x, \hat{\mathbf{b}}_y, \hat{\mathbf{b}}_z$ and $\hat{\mathbf{a}}_x, \hat{\mathbf{a}}_y, \hat{\mathbf{a}}_z$ measures of a vector $\vec{\mathbf{v}}$ . . . . .	39

<b>6</b>	<b>Rotation matrices II</b>	<b>41</b>
6.1	Other representations of orientation (See examples in Hw 7)	41
6.2	Euler rotation angles (see appendix of rotation tables)	42
6.2.1	Converting Body xyz angles to a rotation matrix (also see appendix of rotation tables)	42
6.2.2	Converting a rotation matrix to Body xyz angles (also see appendix of rotation tables)	42
6.2.3	Optional: Space-fixed rotation sequences	43
6.3	Case study: Clinical study of pelvis orientation	44
6.3.1	Pelvic model	44
6.3.2	Body yxz Euler angles [called TOR (tilt-obliquity-rotation) in biomechanics]	45
6.3.3	Body zxy Euler angles [called ROT (rotation-obliquity-tilt) in biomechanics]	45
6.3.4	Clinical angles (physically measurable angles)	46
6.3.5	Summary: Euler angles, clinical angles, and pelvis orientation	47
6.4	Simple $\theta \hat{\lambda}$ rotations	48
6.4.1	How a simple $\theta \hat{\lambda}$ rotation affects an arbitrary vector $\vec{b}$ fixed in $B$	48
6.4.2	Converting a simple $\theta \hat{\lambda}$ rotation to a rotation matrix	48
6.5	Euler parameters (quaternion) and $\theta \hat{\lambda}$ rotations	49
6.5.1	Calculating $\theta \hat{\lambda}$ from $\epsilon_0 \vec{\epsilon}$ (or Euler parameters/quaternion)	49
6.5.2	Euler parameters and how a simple $\theta \hat{\lambda}$ rotation affects an arbitrary vector	49
6.5.3	Converting Euler parameters (quaternion) to a rotation matrix	50
6.5.4	Converting a rotation matrix to Euler parameters (or $\theta \hat{\lambda}$ or Rodrigues parameters)	50
6.5.5	Euler parameters (quaternion) and inverse rotations	51
6.5.6	Euler parameters (quaternion) and successive rotations	51
6.5.7	Euler parameters (quaternion) and small rotations	51
6.5.8	Converting Body xyz angles to Euler parameters (quaternion)	51
6.6	Rodrigues parameters (invented by Euler 1770, rediscovered by Rodrigues 1840)	52
6.7	Poisson parameters (9 elements of a rotation matrix)	52
6.7.1	Optional: Interdependencies in the elements of any rotation matrix $R$	52
6.7.2	Optional: Notes about rotation matrices	52
6.8	Optional: Indirect determination of orientation	53
6.9	SVD orthogonalization of an approximate rotation matrix	53
6.10	Optional: Proofs	55
6.10.1	Proof that equation (14) corresponds to a eigenvector of a rotation matrix	55
6.10.2	Geometrical proof of how a $\theta \hat{\lambda}$ rotation affects a vector fixed in $B$	55
6.10.3	Mathematical proof of how a $\theta \hat{\lambda}$ rotation affects a vector fixed in $B$	56
6.10.4	Proof of converting simple $\theta \hat{\lambda}$ rotations to a rotation matrix	56
6.10.5	Proof of Euler parameters to rotation matrix	57
6.10.6	Proof of rotation matrix to Euler parameters (algorithm in Section 6.5.4)	57
6.10.7	Proof of converting Body xyz angles to Euler parameters	58
<b>7</b>	<b>Vector differentiation and integration</b>	<b>59</b>
7.1	Differentiation concepts: Changes in magnitude and direction	59
7.2	Expressing a vector in terms of a rigid vector basis	60
7.3	Derivative of a vector in a rigid basis (or reference frame)	60
7.4	Constant vectors (vectors fixed in a reference frame)	60
7.5	Vector $\vec{v}$ whose magnitude $ \vec{v} $ is constant	61
7.6	Properties of ordinary <u>or</u> partial derivatives of vectors	61
7.7	Example: Derivatives of a vector	61
7.8	Differential of a vector in a rigid basis (or reference frame)	62
7.9	Integral of a vector in a rigid basis (or reference frame)	62
7.10	Optional: Limit of a vector in a reference frame	62
7.11	Optional: Differentiation with respect to a vector (gradients)	63

7.12	Optional: Proof of vector dot-product derivative property . . . . .	64
<b>8</b>	<b>Angular velocity &amp; angular acceleration</b>	<b>65</b>
8.1	Angular velocity concepts: Moon and Earth celestial systems . . . . .	65
8.2	What is a reference frame? . . . . .	66
8.2.1	Orientation of a rigid body (or reference frame) . . . . .	66
8.2.2	Differences between a vector basis, rigid frame, and reference frame . . . . .	66
8.2.3	What is a Newtonian (inertial/fixed) reference frame? $\vec{F} = m\vec{a}$ . . . . .	66
8.3	Angular velocity and the golden rule for vector differentiation . . . . .	67
8.3.1	Example: Angular velocity and vector differentiation . . . . .	67
8.3.2	Example: Vector differentiation and angular momentum – spinning body . . . . .	67
8.3.3	Simple angular velocity . . . . .	68
8.3.4	Angular velocity negative property . . . . .	69
8.3.5	Angular velocity addition theorem . . . . .	69
8.3.6	Angular velocity example: Chaotic plate pendulum . . . . .	69
8.3.7	Optional: New formula for angular velocity (Mitiguy, 1995) . . . . .	69
8.3.8	Optional: Angular velocity and orthogonal basis vectors . . . . .	70
8.3.9	Optional: Angular velocity and rotation matrices . . . . .	71
8.4	Angular acceleration . . . . .	71
8.4.1	Angular acceleration addition theorem . . . . .	71
8.4.2	Angular acceleration negative property . . . . .	71
8.4.3	Angular acceleration example: Chaotic plate pendulum . . . . .	72
8.4.4	Optional: Second time-derivative of a vector in a reference frame . . . . .	72
8.5	Optional: Angular velocity proofs . . . . .	72
8.5.1	Proof of existence and uniqueness of the defining property of angular velocity . . . . .	72
8.5.2	Proof of the new formula for angular velocity . . . . .	73
8.5.3	Proof of angular velocity and orthogonal basis vectors . . . . .	74
8.5.4	Proof of simple angular velocity . . . . .	74
8.5.5	Proof of angular velocity addition theorem . . . . .	75
8.5.6	Proof of angular velocity negative property . . . . .	75
8.5.7	Proof of $2^{nd}$ time-derivative of any vector . . . . .	75
<b>9</b>	<b>Angular velocity and kinematical ODEs</b>	<b>77</b>
9.1	Time-derivative of yaw-pitch-roll Euler angles and angular velocity $\vec{\omega}$ . . . . .	77
9.2	Angular velocity and $\theta\hat{\lambda}$ rotations ( $\vec{\omega}$ in terms of $\dot{\theta}\hat{\lambda}$ and $\frac{d\hat{\lambda}}{dt}$ ) . . . . .	78
9.2.1	Simple angular velocity – the special case $\vec{\omega} = \dot{\theta}\hat{\lambda}$ . . . . .	78
9.2.2	Optional: $\dot{\theta}$ and $\frac{d\hat{\lambda}}{dt}$ in terms of angular velocity $\vec{\omega}$ (kinematical ODEs) . . . . .	78
9.3	Euler vector/parameters (quaternions) and angular velocity $\vec{\omega}$ . . . . .	79
9.3.1	Constraints associated with Euler parameters . . . . .	79
9.3.2	Optional: Angular acceleration $\vec{\alpha}$ and Euler vector/parameters derivatives . . . . .	80
9.3.3	Optional: Euler vector/parameters and small, slow rotations . . . . .	80
9.4	Optional: Rodrigues vector/parameters and angular velocity $\vec{\omega}$ . . . . .	80
9.5	Rotation matrices and angular velocity $\vec{\omega}$ . . . . .	81
9.5.1	Angular velocity matrix $\tilde{\omega}$ in terms of time-derivative of a rotation matrix $\dot{R}$ . . . . .	81
9.5.2	Poisson’s ODE for rotation matrix $\dot{R}$ in terms of angular velocity matrix $\tilde{\omega}$ . . . . .	82
9.5.3	Optional: Angular acceleration and $2^{nd}$ -derivative of rotation matrix $\ddot{R}$ . . . . .	82
9.6	Optional: Proofs . . . . .	83
9.6.1	Proof of angular velocity $\vec{\omega}$ in terms of $\dot{\theta}$ , $\frac{Bd\hat{\lambda}}{dt}$ . . . . .	83
9.6.2	Proof of ODEs relating $\dot{\theta}$ , $\frac{Bd\hat{\lambda}}{dt}$ to angular velocity $\vec{\omega}$ . . . . .	84

9.6.3	Proof of ODEs relating Euler parameters $\dot{\epsilon}_0, \frac{B_d \vec{\epsilon}}{dt}$ to angular velocity $\vec{\omega}$ . . . . .	84
9.6.4	Proof of angular velocity $\vec{\omega}$ in terms of Euler parameters $\dot{\epsilon}_0, \frac{B_d \vec{\epsilon}}{dt}$ . . . . .	85
9.6.5	Proof of angular acceleration $\vec{\alpha}$ in terms of Euler parameters $\ddot{\epsilon}_0, \frac{B_d^2 \vec{\epsilon}}{dt^2}$ . . . . .	85
9.6.6	Proof of $2^{nd}$ -order ODEs relating Euler parameters to angular acceleration $\vec{\alpha}$ . . . . .	85
9.6.7	Proof of ODEs relating Rodrigues parameters $\frac{B_d \vec{\rho}}{dt}$ to angular velocity $\vec{\omega}$ . . . . .	86
9.6.8	Proof of angular velocity $\vec{\omega}$ in terms of Rodrigues parameters $\frac{B_d \vec{\rho}}{dt}$ . . . . .	86
9.6.9	Proof of ODE for angular velocity in terms of $2^{nd}$ -derivative of rotation matrix . . . . .	86
9.6.10	Proof of Poisson's kinematical ODEs $\dot{R} = R\tilde{\omega}$ and $\tilde{\omega} = R^T \dot{R}$ . . . . .	87
<b>10</b>	<b>Points: Velocity and acceleration</b> . . . . .	<b>89</b>
10.1	Definition of a point's velocity and acceleration . . . . .	90
10.2	Velocity and acceleration of two points <u>fixed</u> on a rigid body . . . . .	92
10.3	Velocity and acceleration of a point <u>moving</u> on a rigid body . . . . .	93
10.4	Velocity and acceleration of a point using another point . . . . .	94
10.5	Relative velocity and relative acceleration of a point . . . . .	95
10.6	Elongation and elongation-rate . . . . .	95
10.7	Relationship between distance, position, velocity, and acceleration . . . . .	96
10.7.1	Constant acceleration in a reference frame $N$ – a special case . . . . .	96
10.7.2	Constant acceleration along a curve (also see Section 10.8) . . . . .	96
10.7.3	Circular motion . . . . .	96
10.7.4	Analogy between translational motion and 2D rotational motion . . . . .	96
10.7.5	Example: Free-fall of a sky-diver with constant downward acceleration . . . . .	97
10.8	Speed and distance-traveled in a reference frame (see Hw 9.4, 9.7, 12.10) . . . . .	97
10.9	Optional: Definition of jerk (snap, crackle, pop) . . . . .	98
10.10	Optional: Acceleration vocabulary . . . . .	98
10.11	Velocity and acceleration proofs . . . . .	99
10.11.1	Proof of equivalence of the two relative velocity definitions . . . . .	100
10.11.2	Proof of irrelevance of reference frame for relative velocity of coincident points . . . . .	100
10.11.3	Proof of minimum velocity magnitude/location and instant center . . . . .	101
<b>11</b>	<b>Constraints: Rods, rolling, gears, . . .</b> . . . . .	<b>103</b>
11.1	Number of degrees of freedom . . . . .	104
11.2	Rods, ropes, and separators (example in Section 11.14) . . . . .	104
11.3	Linear actuator . . . . .	104
11.4	Ball and socket joint . . . . .	104
11.5	Revolute joint (also called a hinge or pin joint) . . . . .	105
11.6	Revolute motor (revolute joint with additional angular constraint) . . . . .	105
11.7	Cylindrical joint (revolute joint on straight slot) . . . . .	105
11.8	Ball and socket in slot . . . . .	105
11.9	Prismatic joint (also called a slider joint or square-slot joint) . . . . .	106
11.10	Universal joint (Hooke's joint) . . . . .	106
11.11	Contact (an intermittent inequality constraint) . . . . .	106
11.12	Sliding, rolling, and pure rolling (contact) . . . . .	107
11.12.1	Example: Velocity, sliding, rolling, and two points fixed on a rigid object . . . . .	107
11.12.2	Example: Acceleration, sliding, rolling, and two points fixed on a rigid object . . . . .	107
11.12.3	Example: Rolling motions of a cylinder inside a cylinder . . . . .	108
11.13	Gears and constraint equations . . . . .	109
11.14	Constraints associated with cables supporting a platform . . . . .	111

11.15	Optional: Constraint stabilization . . . . .	112
<b>12</b>	<b>Particles (points with mass)</b>	<b>113</b>
12.1	System of particles . . . . .	114
12.2	Linear (translational) momentum for particles . . . . .	114
12.3	Angular momentum and shift theorem for particles . . . . .	115
12.4	Kinetic energy for particles . . . . .	116
12.5	Effective force of a particle . . . . .	117
12.5.1	Effective force of a system of particles . . . . .	117
12.5.2	Effective force and linear momentum . . . . .	117
12.6	Moment of effective force and shift theorem for particles . . . . .	117
12.6.1	Moment of effective force and angular momentum . . . . .	118
12.7	Parallels between momentum and effective force . . . . .	118
12.8	Infant on a swing: Momentum, effective force, and energy . . . . .	119
12.9	Forming and solving $\vec{F} = m\vec{a}$ for translational motion . . . . .	120
12.10	Example: Velocity, acceleration, and $\vec{F} = m\vec{a}$ . . . . .	121
12.11	Optional: Proofs for momentum and effective force . . . . .	122
12.11.1	Proof of linear momentum of a system of particles . . . . .	122
12.11.2	Proof of effective force and its relationship to linear momentum . . . . .	122
12.11.3	Proof of shift theorem for angular momentum . . . . .	123
12.12	Optional: A different definition of angular momentum . . . . .	123
<b>13</b>	<b>Mass, center of mass, centroid</b>	<b>125</b>
13.1	Mass . . . . .	125
13.2	Center of mass and centroid . . . . .	125
13.3	Figures and their length, area, and volume . . . . .	127
13.4	Integrals for mass, center of mass, and centroid . . . . .	127
13.5	Experiments, tables, CAD/CAE, and medical scanning . . . . .	128
13.6	Optional: Measuring mass . . . . .	128
13.7	Optional: The language and etymology of “mass” . . . . .	129
13.8	Optional: What is mass? . . . . .	129
13.9	Optional: Mass, energy, and physics . . . . .	129
<b>14</b>	<b>Concepts: Moments/products of inertia</b>	<b>131</b>
14.1	Moment of inertia (also see Section 16.3) . . . . .	131
14.1.1	Example: Moments of inertia of a particle . . . . .	132
14.1.2	Conceptual example of moments of inertia . . . . .	132
14.1.3	Demonstration: Effect of moment of inertia on a rolling cylinder . . . . .	132
14.1.4	Demonstration: Effect of moment of inertia on a spinning book . . . . .	132
14.1.5	Shift theorem for moment of inertia (parallel axis theorem) . . . . .	133
14.2	Products of inertia (also see Section 16.4) . . . . .	133
14.2.1	Example: Products of inertia of a particle . . . . .	134
14.2.2	Conceptual example of products of inertia (also see Homework 13.7) . . . . .	134
14.2.3	Demo: Effect of product of inertia on a rattleback (wobblestone) . . . . .	134
14.2.4	Shift theorem for product of inertia . . . . .	134
14.2.5	Two sign conventions ( $\pm$ ) for products of inertia . . . . .	135
14.3	Optional: Radius of gyration and moment of inertia . . . . .	136
14.3.1	Concept: Radius of gyration as matter concentrated in a thin-ring . . . . .	136
14.3.2	Concept: Radius of gyration as a single particle . . . . .	136
14.3.3	Context: Uses for radius of gyration . . . . .	136
14.3.4	Calculation: Shift theorem for radius of gyration (parallel axis theorem) . . . . .	136

<b>15 Dyadics</b>	<b>137</b>
15.1 Dyadic properties (vector $\ast$ vector, dot-products, zero and unit dyadics, derivative)	138
15.2 Expressing a dyadic in terms of basis $\vec{a}_1, \vec{a}_2, \vec{a}_3$	139
15.3 Derivative of a dyadic in a rigid basis (or a reference frame)	139
15.4 Dyadics and matrices	140
15.5 Dyadic symmetry	140
15.6 Dyadic principal directions, eigenvalues, and eigenvectors	141
15.7 Optional: Dyadic inverse and positive-definite	141
15.8 Optional: Proof of unit dyadic expressed in orthogonal basis	141
<b>16 Inertia dyadics</b>	<b>143</b>
16.1 Inertia dyadic: A “suitcase” for moments and products of inertia	143
16.1.1 Inertia dyadic for a particle or system	143
16.1.2 Inertia dyadics for continuous systems	143
16.1.3 Shift theorem for an inertia dyadic (for an arbitrary system $S$ )	144
16.1.4 Example: Inertia dyadic of a particle (also see example in Section 16.6)	144
16.2 Inertia scalars in terms of an inertia dyadic	144
16.3 Moments of inertia and inertia dyadics (also see Section 14.1)	145
16.4 Products of inertia and inertia dyadics (also see Section 14.2)	145
16.5 Inertia matrix (a symmetric matrix)	146
16.6 Example: Inertia properties for an infant on a swing	147
16.7 Example: Mass properties of three particles on a parallelepiped	147
16.8 Optional: Axis-symmetric and triaxially-symmetric inertia	148
16.9 Motivating concepts for inertia dyadics	149
16.10 Inertia vector	150
16.11 Principal inertia directions – an eigen-problem	150
16.12 Optional: Proof of inertia dyadic shift theorem	151
16.13 Optional: Summations and the inertia dyadic	151
16.14 Nonnegative sums and moment of inertia inequalities	152
16.15 Proof of product of inertia inequalities	152
<b>17 Rigid bodies</b>	<b>153</b>
17.1 What is a rigid body? (see examples in Hw 15, laws of motion in Chapter 22).	153
17.2 Angular momentum of a rigid body (also see Sections 22.4, 22.7)	154
17.2.1 Conservation of angular momentum for an axis-symmetric rigid body	154
17.3 Effective force of a rigid body	155
17.4 Moment of effective force of a rigid body	155
17.5 Kinetic energy of a rigid body	156
17.6 Examples with an airplane (simple model)	157
17.6.1 Linear/translational and angular momentum of an airplane in $N$	157
17.6.2 Effective force and moment of effective force of an airplane in $N$	157
17.6.3 Kinetic energy of an airplane ( $B$ 's kinetic energy in $N$ )	157
17.7 Optional: Proof of angular momentum for a rigid body $B$	158
17.8 Optional: Proof of moment of effective force for a rigid body $B$	159
17.9 Optional: Proof of kinetic energy for a rigid body $B$	161
17.10 Optional: Proof of conservation of angular momentum for an axis-symmetric rigid body $B$	162
<b>18 Force and resultant</b>	<b>163</b>
18.1 Force and the law of action/reaction	163
18.2 Statics, dynamics, and resultant forces	164
18.3 Resultant of a set of vectors (e.g., forces on a point, body, or system)	164
18.4 Resultant force on a system (internal force cancellation)	164

18.5	Force and effective force – two types of forces in $\vec{F} = m\vec{a}$ . . . . .	165
18.6	Contact and distance forces . . . . .	165
18.7	Applied and constraint forces . . . . .	165
18.8	Optional: Conditions for force to exist (section under ongoing discussion) . . . . .	165
18.9	Optional: The definition and philosophy of force . . . . .	166
18.10	Optional: Force, mass, gravity, space, time, reference frames . . . . .	166
18.11	Optional: Physicist’s fundamental forces . . . . .	167
<b>19</b>	<b>Moments and torque</b> . . . . .	<b>169</b>
19.1	Moment of a vector . . . . .	169
19.1.1	Moment of a set of vectors . . . . .	169
19.1.2	Shift theorem for the moment of a set of vectors . . . . .	169
19.1.3	$\hat{u} \cdot \vec{M}^{S/P} = \hat{u} \cdot \vec{M}^{S/O}$ if $\hat{u}$ is parallel to line $\overline{OP}$ (useful for MG road-maps in Section 23.1) . . . . .	170
19.1.4	Moment arm of a vector about a point (example at end of Section 19.6) . . . . .	170
19.2	Moment of internal forces . . . . .	170
19.3	Statics, dynamics, and moments of forces . . . . .	170
19.4	Definition of static equilibrium . . . . .	171
19.5	Torque of a set of vectors (moment of a couple) . . . . .	171
19.6	Neuromuscular biomechanics example: Muscle tension for curling . . . . .	172
19.7	Optional: Proof of shift theorem for moment of a set of vectors . . . . .	174
19.8	Optional: Minimum moment magnitude and central axis (wrench) . . . . .	174
<b>20</b>	<b>Replacement of forces and bound vectors</b> . . . . .	<b>175</b>
20.1	Replacement of distance forces (not a unique process) . . . . .	175
20.2	Replacement of contact forces . . . . .	176
20.3	Applicability of equivalence/replacement? . . . . .	176
20.4	Replacement of forces associated with constraints . . . . .	177
20.5	Optional: Proof of action/reaction for contact forces . . . . .	178
<b>21</b>	<b>Encyclopedia of applied force and torque</b> . . . . .	<b>179</b>
21.1	Weight, mass, and gravity . . . . .	179
21.2	Uniform gravity on a particle or body (see appendix for $g$ for planets) . . . . .	179
21.3	Universal gravitational attraction between two particles . . . . .	180
21.4	Electrostatic forces and Coulomb’s law for charged particles . . . . .	181
21.5	DC (direct current) permanent magnet motors . . . . .	181
21.6	Kinetic friction and the Continuous Friction Law . . . . .	182
21.7	Translational spring between two points . . . . .	183
21.8	Rotational (torsional) spring . . . . .	183
21.9	Translational damper between two points . . . . .	184
21.10	Rotational (torsional) damper . . . . .	184
21.11	Light linear springs and dampers in <i>series</i> . . . . .	185
21.12	Light linear springs and dampers in <i>parallel</i> . . . . .	185
21.13	Viscous damper between two surfaces . . . . .	186
21.14	Fluid forces (lift and drag) . . . . .	186
21.14.1	Demo: Experimental determination of drag forces on a coffee filter . . . . .	187
21.14.2	Closed-form solutions with aerodynamic drag . . . . .	187
21.15	Aerodynamic forces on a baseball - a case study in philosophy . . . . .	188
21.15.1	Drag force on a baseball having magnitude $b\vec{v}_{rel}^2$ . . . . .	188
21.15.2	Lift (Magnus) force on a baseball . . . . .	189
21.15.3	Aerodynamic torque on a baseball . . . . .	190
21.15.4	Differences in aerodynamic models . . . . .	190
21.16	Optional: Gravitational attraction between a particle and a body . . . . .	191

21.17	Optional: Gravitational attraction between two bodies . . . . .	192
21.18	Optional: Center of gravity . . . . .	193
21.19	Optional: Proofs for spring and gravity forces . . . . .	194
21.19.1	Optional: Proof of light linear springs and dampers in <i>series</i> . . . . .	194
21.19.2	Optional: Proof of light linear springs and dampers in <i>parallel</i> . . . . .	194
21.19.3	Optional: Proof for uniform gravity on a body or set of particles . . . . .	194
<b>22</b>	<b>Newton/Euler dynamics</b> . . . . .	<b>195</b>
22.1	Newton’s law of motion for a particle . . . . .	196
22.2	Newton’s equation for a system . . . . .	196
22.3	Linear momentum principle . . . . .	196
22.4	Angular momentum principle . . . . .	196
22.5	Euler’s equations for a rigid body (3D) . . . . .	197
22.6	Impulse/momentum . . . . .	198
22.7	Conservation of momentum . . . . .	198
22.8	Optional: Proof: Linear momentum principle ( $\vec{\mathbf{F}}^S = m^S * \vec{\mathbf{a}}^{S_{cm}}$ ) . . . . .	199
22.9	Proof: Angular momentum principle, Euler’s rigid body equation . . . . .	199
<b>23</b>	<b>Dynamics with MG road-maps</b> . . . . .	<b>203</b>
23.1	MG road-maps for efficient statics and dynamics . . . . .	204
23.1.1	MG road-map: Projectile motion (2D) . . . . .	205
23.1.2	MG road-map: Rigid body pendulum (2D) . . . . .	205
23.1.3	MG road-map: Inverted pendulum on cart ( $x$ and $\theta$ ) (2D) . . . . .	205
23.1.4	MG road-map: Rotating rigid body (3D) . . . . .	206
23.1.5	MG road-map: Bridge crane equations of motion (2D) . . . . .	206
23.1.6	MG road-map: Particle on spinning slot (2D) . . . . .	206
23.1.7	MG road-map: Motion of a chaotic double pendulum (3D) . . . . .	207
23.1.8	MG road-map: Particle pendulum (2D) – angle and tension . . . . .	207
<b>24</b>	<b>Power and work</b> . . . . .	<b>209</b>
24.1	Power/energy-rate principle (for any system $S$ in a Newtonian frame $N$ ). . . . .	209
24.1.1	Rotational power/energy-rate principle for a rigid body . . . . .	210
24.1.2	Translational power/energy-rate principle . . . . .	211
24.2	Power of a force, set of forces, or torque on a rigid body . . . . .	211
24.3	Forces that do not contribute to power (workless forces) . . . . .	212
24.4	Power/energy-rate to size a torque-motor . . . . .	212
24.5	Power/energy-rate for a commercial spring scale . . . . .	213
24.6	Definition of work with an integral or differential equation . . . . .	214
24.7	Work/energy principle . . . . .	214
24.8	Optional: Proofs with power . . . . .	215
24.8.1	Optional: Proof of the power/energy-rate principle . . . . .	215
24.8.2	Optional: Proof of the rotational power/energy-rate principle . . . . .	215
24.8.3	Optional: Proof of the translational power/energy-rate principle . . . . .	216
24.8.4	Optional: Proof for power of a set of forces (or <u>torque</u> ) on a rigid body $B$ . . . . .	216
<b>25</b>	<b>Potential energy</b> . . . . .	<b>217</b>
25.1	Work/Energy principle . . . . .	217
25.2	Conservation of mechanical energy (special case of work/energy) . . . . .	217
25.3	Potential energy - a special type of work for “conservative” forces . . . . .	218
25.3.1	Potential energy for a constant force or a uniform gravitational field . . . . .	218
25.3.2	Potential energy for central forces (e.g., springs and inverse-square-law gravity) . . . . .	219
25.3.3	Potential energy for a simple rotational spring . . . . .	219

25.4	Force and gradient of potential energy . . . . .	220
25.5	Optional: Proofs of potential energy . . . . .	220
25.5.1	Optional: Proof of potential energy for a constant force in reference frame $N$ . . . . .	220
25.5.2	Optional: Proof of potential energy for a central force . . . . .	220
25.5.3	Optional: Proof of applied force as negative gradient of potential energy . . . . .	221
<b>26</b>	<b>Kane's method</b>	<b>223</b>
26.1	Kane's equation of motion (dynamics) . . . . .	223
26.1.1	Examples of Kane's method (also see examples in Hw 21, 22 ) . . . . .	223
26.1.2	Comparison of the methods of Kane and Lagrange (also see Section 28.8) . . . . .	223
26.2	Generalized speeds and partial velocities (for Kane's method) . . . . .	224
26.3	Kane's method (with proof) . . . . .	225
26.4	Generalized force - useful for Lagrange and Kane's equations . . . . .	226
26.4.1	Generalized force for a force, set of forces, or torque on a rigid body . . . . .	226
26.4.2	Generalized forces, potential energy, and static equilibrium . . . . .	227
26.4.3	Non-contributing forces (forces that do not contribute to generalized force) . . . . .	227
26.4.4	Example: Generalized force for a commercial spring scale . . . . .	227
26.4.5	Examples of generalized forces – also see guided problems in Hw 21, 22 . . . . .	227
26.5	Generalized effective force of a particle (handling $m\vec{a}$ ) . . . . .	228
26.5.1	Example of generalized effective force of a particle (refers to example in Section 12.8) . . . . .	228
26.5.2	Generalized effective force of a system of particles (handling $m\vec{a}$ ) . . . . .	228
26.6	Generalized effective force of a rigid body (handling $m\vec{a}$ and $I\vec{\alpha}$ ) . . . . .	228
26.6.1	Optional: Generalized effective force's relationship to kinetic energy . . . . .	229
26.6.2	Optional: Efficiency of generalized effective force vs. kinetic energy . . . . .	229
26.7	Optional: Generalized momentum of a particle and rigid body . . . . .	230
26.7.1	Generalized momentum of a system of particles . . . . .	230
26.7.2	Generalized momentum and kinetic energy for a system . . . . .	230
26.7.3	Example of generalized momentum of a particle . . . . .	230
26.7.4	Generalized momentum of a rigid body . . . . .	230
26.8	Optional: Proof of generalized effective force for a rigid body . . . . .	231
26.8.1	Optional: Proof of generalized forces from potential energy . . . . .	232
<b>27</b>	<b>Lagrange's equation of motion</b>	<b>233</b>
27.1	Lagrange's equations of the first and second kind . . . . .	233
27.1.1	Lagrange's equations - a mathematical process . . . . .	233
27.1.2	Examples of Lagrange's method (also see examples in Hw 21 ,22) . . . . .	233
27.1.3	Optional: Lagrange multipliers $\lambda$ . . . . .	233
27.2	Optional: Proof of Lagranges equations of motion . . . . .	234
27.3	Optional: Virtual work . . . . .	236
27.3.1	Virtual work for a force or set of forces . . . . .	236
27.3.2	Virtual work of a set of forces (or torque) on a rigid body . . . . .	236
27.3.3	Virtual work and generalized force . . . . .	236
27.3.4	Virtual work and static equilibrium . . . . .	236
27.4	Optional: Virtual displacements/angular displacements . . . . .	237
27.5	Optional: Inefficiencies in Lagranges equations . . . . .	237
27.6	Optional: Interchange property of partial/ordinary derivatives . . . . .	238
<b>28</b>	<b>Force and motion scalars: Generalized coordinates/speeds, . . .</b>	<b>239</b>
28.1	Force and impulse scalars - pushes and pulls . . . . .	239
28.2	State and state variables . . . . .	239
28.3	Position scalars and generalized coordinates . . . . .	239
28.4	Velocity scalars and generalized speeds (also see Section 28.8) . . . . .	240

28.5	Kinematical differential equations (ODEs)	240
28.6	Velocity written in terms of velocity scalars (unconstrained)	241
28.6.1	Velocity scalars, motion constraints, and degrees of freedom	241
28.6.2	Optional: Motion constraints and independent/dependent velocity scalars	241
28.6.3	Optional: Velocity written in terms of velocity scalars (with constraints)	242
28.7	Research topic: Acceleration scalars	242
28.8	Optional: Guidelines for choosing efficient velocity scalars	243
<b>29</b>	<b>MIPSI: Classic particle pendulum</b>	<b>247</b>
29.1	Modeling the classic particle pendulum	247
29.2	Identifiers for the classic particle pendulum	248
29.3	Physics: Equations of motion of the classic particle pendulum	248
29.3.1	$\vec{F} = m\vec{a}$ for the classic particle pendulum	249
29.3.2	Angular momentum principle for the classic particle pendulum	250
29.3.3	Euler's rigid body equation for the classic particle pendulum	250
29.3.4	Kinetic energy for the classic particle pendulum	250
29.3.5	Power/energy-rate principle for the classic particle pendulum	251
29.3.6	Conservation of mechanical energy for the classic particle pendulum	251
29.3.7	Kane's method for the classic particle pendulum	252
29.3.8	Lagrange's method for the classic particle pendulum	252
29.4	Solution of the classic particle pendulum ODE	252
29.4.1	Numerical solution of pendulum ODE via MotionGenesis and/or MATLAB <sup>®</sup>	252
29.4.2	Analytical (closed-form) solution of the classic particle pendulum ODE	253
29.4.3	Simplification and analytical solution of the classic particle pendulum ODE	253
29.5	Interpretation of results for the classic particle pendulum	253
<b>30</b>	<b>Example: Inverted pendulum on cart</b>	<b>255</b>
30.1	Kinematics (space and time)	255
30.2	Rotation matrix, angular velocity, angular acceleration	256
30.3	Position vectors, velocity, acceleration	256
30.4	Forces, moments, and free-body diagrams (2D)	257
30.5	Mass, center of mass, inertia (required by dynamics)	258
30.6	Newton/Euler laws of motion for $A$ and $B$ separately (inefficient)	258
30.6.1	Dynamics for a rigid body with a simple angular velocity (special 2D case)	258
30.6.2	Optional: Angular momentum principle (2D alternative to Section 30.6.1)	258
30.6.3	Optional: Angular momentum principle (3D alternative to Section 30.6.1)	259
30.7	Equations of motion via MG road-maps/D'Alembert (efficient)	259
30.8	Generalized forces for Lagrange/Kane's equations of motion	260
30.9	Lagrange's equations of motion (described in Chapter 27)	260
30.10	Kane's equations of motion (described in Chapter 26)	261
30.11	Matrix form of equations of motion (for solution, controls, ...)	261
<b>31</b>	<b>Solving for forces and motion. Forward, inverse, and mixed dynamics.</b>	<b>263</b>
31.1	Matrix form of equations of motion	263
31.1.1	Inverse dynamics: Calculating knee joint torque	264
31.1.2	Inverse dynamics: Calculating hip and knee joint torque	264
31.2	Solving for forces and motion with operational tasks	265
31.2.1	Inverse dynamics: Calculating forces from specified end-effector motion	265
31.2.2	Inverse dynamics with operational task: Hip and knee joint torques	266

<b>32 Feed-forward control</b>	<b>267</b>
32.1 Feed-forward control for directly controlling $Q$ or $U$	268
32.1.1 Example: Feed-forward control of a rocket sled's <u>velocity</u>	268
32.1.2 Example: Feed-forward control of rocket sled's <u>position</u>	269
32.1.3 Example: Feed-forward control with additional actuator	270
32.2 Feed-forward control with operational tasks	271
32.3 Optional: $k_p$ , $k_d$ , and analytical solutions of second-order ODEs	272
32.4 Derivation/insights into the mathematics of feed-forward control	273
<b>33 Flexible Bodies (Overview)</b>	<b>275</b>
33.1 Three points associated with flexible-body motion	275
33.2 References for Banerjee's flexible-body theory	275
