Dynamics – what does it do for us?	i
Newton’s three laws	ii
Methods for forming equations of motion	iii
1 Math review	1
1.1 Unit systems - SI and U.S.	1
1.2 Geometry: Ancient Euclid and modern vectors	2
1.3 Circles and their properties	2
1.4 Triangles and ratios of their sides (sine, cosine, tangent)	2
1.4.1 Properties of sine and cosine and useful trigonometric formulas	3
1.4.2 Sine and cosine as functions (Euler, circa 1730)	4
1.4.3 The amplitude-phase formulas for sine and cosine	4
1.4.4 The function $\text{atan2}(y, x)$	4
1.5 Types of scalars: Variable, Specified, Constant	5
1.6 Differentiation	5
1.6.1 Definition of an ordinary derivative of a scalar function	5
1.6.2 Definition of a partial derivative of a scalar function	5
1.6.3 Definition of the differential of an independent variable and scalar function	6
1.6.4 Definition of the total derivative of a scalar function	6
1.6.5 Short table of derivatives frequently encountered in engineering	6
1.6.6 Example: Partial and ordinary differentiation	7
1.6.7 Good product rule for differentiation (for scalars, \vec{v} ectors, matrices, . . .)	7
1.6.8 Quotient rule for derivatives: Use exponents and the product rule	7
1.6.9 Chain rule for derivatives	7
1.6.10 Implicit differentiation: A useful tool for calculating derivatives	7
1.7 Integration and a short table of integrals	8
1.8 Minimization and maximization (optimization)	9
1.9 Solutions of <i>polynomial</i> equations (roots)	11
1.10 Continuous solutions of <i>nonlinear</i> algebraic equations	11
2 Vectors	13
2.1 Examples of scalars, vectors, and dyadics	13
2.2 Definition of a vector	14
2.3 Zero vector $\vec{0}$ and its properties	14
2.4 Unit \hat{v} ectors	15
2.5 Equal vectors (=)	15
2.6 Vector addition (+)	15
2.7 Vector multiplied or divided by a scalar (* or /)	16
2.8 Vector negation and subtraction (-)	16
2.9 Vector dot product (\cdot)	17
2.9.1 Properties of the dot-product (\cdot)	17

2.9.2	Uses for the dot-product (\cdot)	17
2.9.3	Special case: Dot-products with orthogonal unit vectors	18
2.9.4	Examples: Vector dot-products (\cdot)	18
2.9.5	Dot-products to change vector equations to scalar equations (see Hw 1.31)	18
2.10	Vector cross product (\times)	19
2.10.1	Properties of the cross-product (\times)	19
2.10.2	Uses for the cross-product (\times)	19
2.10.3	Special case: Cross-products with right-handed, orthogonal, unit vectors	20
2.10.4	Examples: Vector cross-products (\times)	20
2.11	Scalar triple product ($\cdot \times$ or $\times \cdot$)	21
2.11.1	Scalar triple product and the volume of a tetrahedron	21
2.11.2	($\times \cdot$) to change vector equations to scalar equations (see Hw 1.31)	21
3	Position vectors and vector geometry	23
3.1	Position of a point (or particle) (see examples in Hw 3)	23
3.2	Distance (also see speed and distance-traveled in Section 10.8)	24
3.3	Example: Cable lengths, angles, surface area (orthogonal walls)	25
3.4	Proof of sine addition formula with vector cross-products	26
4	Vector basis	27
4.1	What is a vector basis?	27
4.2	Rigid and non-rigid bases	28
4.3	Non-orthogonal basis	28
4.4	Creating various 3D bases from two non-parallel vectors	28
4.5	Concept: What is the vector vs. how is it expressed	29
4.6	Expressing a vector in terms of basis $\vec{a}_1, \vec{a}_2, \vec{a}_3$	30
4.7	Optional: Coordinate system vs. vector bases	31
4.8	Optional: Rigid frame and transformation matrices	32
5	Rotation matrices I	33
5.1	Uses for the rotation matrix ${}^aR^b$ (for geometry, statics, motion analysis, stress . . .)	33
5.2	Rotation matrices and matrix multiplication	34
5.3	Rotation matrices - who cares?	34
5.4	Simple rotation matrix examples	35
5.4.1	Example: Calculating angles between unit vectors $\hat{a}_x, \hat{a}_y, \hat{a}_z$ and $\hat{b}_x, \hat{b}_y, \hat{b}_z$	35
5.4.2	Example: Calculation of rotation matrix inverse (use transpose)	35
5.4.3	Example: Rotation matrix for express, dot, and cross	35
5.5	Forming rotation matrices and matrix multiplication	36
5.5.1	Example: Forming the simple rotation matrix ${}^aR^n$	36
5.5.2	Hug rule (a pattern for quickly forming simple rotation matrices)	36
5.5.3	Example: Forming the simple rotation matrix ${}^bR^a$	37
5.5.4	Example: Rotation matrix multiplication to form ${}^bR^n = {}^bR^a * {}^aR^n$	37
5.6	What is an angle?	38
5.7	Optional: Proofs	39
5.7.1	Proof that a rotation matrix is orthonormal	39
5.7.2	Proof of relationship between $\hat{b}_x, \hat{b}_y, \hat{b}_z$ and $\hat{a}_x, \hat{a}_y, \hat{a}_z$ measures of a vector \vec{v}	39
6	Rotation matrices II	41
6.1	Other representations of orientation (See examples in Hw 7)	41
6.2	Euler rotation angles (see appendix of rotation tables)	42
6.2.1	Converting Body xyz angles to a rotation matrix (also see appendix of rotation tables)	42
6.2.2	Converting a rotation matrix to Body xyz angles (also see appendix of rotation tables)	42

6.2.3	Optional: Space-fixed rotation sequences	43
6.3	Case study: Clinical study of pelvis orientation	44
6.3.1	Pelvic model	44
6.3.2	Body yxz Euler angles [called TOR (tilt-obliquity-rotation) in biomechanics]	45
6.3.3	Body zxy Euler angles [called ROT (rotation-obliquity-tilt) in biomechanics]	45
6.3.4	Clinical angles (physically measurable angles)	46
6.3.5	Summary: Euler angles, clinical angles, and pelvis orientation	47
6.4	Simple $\theta \hat{\lambda}$ rotations	48
6.4.1	How a simple $\theta \hat{\lambda}$ rotation affects an arbitrary vector \vec{b} fixed in B	48
6.4.2	Converting a simple $\theta \hat{\lambda}$ rotation to a rotation matrix	48
6.5	Euler parameters (quaternion) and $\theta \hat{\lambda}$ rotations	49
6.5.1	Calculating $\theta \hat{\lambda}$ from $\epsilon_0 \vec{e}$ (or Euler parameters/quaternion)	49
6.5.2	Euler parameters and how a simple $\theta \hat{\lambda}$ rotation affects an arbitrary vector	49
6.5.3	Converting Euler parameters (quaternion) to a rotation matrix	50
6.5.4	Converting a rotation matrix to Euler parameters (or $\theta \hat{\lambda}$ or Rodrigues parameters)	50
6.5.5	Euler parameters (quaternion) and inverse rotations	51
6.5.6	Euler parameters (quaternion) and successive rotations	51
6.5.7	Euler parameters (quaternion) and small rotations	51
6.5.8	Converting Body xyz angles to Euler parameters (quaternion)	51
6.6	Rodrigues parameters (invented by Euler 1770, rediscovered by Rodrigues 1840)	52
6.7	Poisson parameters (9 elements of a rotation matrix)	52
6.7.1	Optional: Interdependencies in elements of a rotation matrix	52
6.7.2	Optional: Notes about rotation matrices	52
6.8	Optional: Indirect determination of orientation	53
6.9	Optional: Proofs	53
6.9.1	Proof that equation (14) corresponds to an eigenvector of a rotation matrix	53
6.9.2	Geometrical proof of how a $\theta \hat{\lambda}$ rotation affects a vector fixed in B	54
6.9.3	Mathematical proof of how a $\theta \hat{\lambda}$ rotation affects a vector fixed in B	55
6.9.4	Proof of converting simple $\theta \hat{\lambda}$ rotations to a rotation matrix	55
6.9.5	Proof of Euler parameters to rotation matrix	56
6.9.6	Proof of rotation matrix to Euler parameters	56
6.9.7	Proof of converting Body xyz angles to Euler parameters	57

7 Vector differentiation and integration 59

7.1	Differentiation concepts: Changes in magnitude and direction	59
7.2	Expressing a vector in terms of a rigid vector basis	60
7.3	Derivative of a vector in a rigid basis (or reference frame)	60
7.4	Constant vectors (vectors fixed in a reference frame)	60
7.5	Vector \vec{v} whose magnitude $ \vec{v} $ is constant	61
7.6	Properties of ordinary <u>or</u> partial derivatives of vectors	61
7.7	Example: Derivatives of a vector	61
7.8	Differential of a vector in a rigid basis (or reference frame)	62
7.9	Integral of a vector in a rigid basis (or reference frame)	62
7.10	Optional: Limit of a vector in a reference frame	62
7.11	Optional: Differentiation with respect to a vector (gradients)	63
7.12	Optional: Proofs	64

8	Angular velocity & angular acceleration	65
8.1	Angular velocity concepts: Moon and Earth celestial systems	65
8.2	What is a reference frame?	66
8.2.1	Orientation of a rigid body (or reference frame)	66
8.2.2	Differences between a vector basis, rigid frame, and reference frame	66
8.2.3	What is a Newtonian (inertial/fixed) reference frame? $\vec{F} = m\vec{a}$	66
8.3	Angular velocity and the golden rule for vector differentiation	67
8.3.1	Example: Angular velocity and vector differentiation	67
8.3.2	Example: Vector differentiation and angular momentum – spinning book	67
8.3.3	Simple angular velocity	68
8.3.4	Angular velocity negative property	69
8.3.5	Angular velocity addition theorem	69
8.3.6	Angular velocity example: Chaotic plate pendulum	69
8.3.7	Optional: New formula for angular velocity (Mitiguy, 1995)	69
8.3.8	Optional: Angular velocity and orthogonal basis vectors	70
8.3.9	Optional: Angular velocity and rotation matrices	71
8.4	Angular acceleration	71
8.4.1	Angular acceleration addition theorem	71
8.4.2	Angular acceleration negative property	71
8.4.3	Angular acceleration example: Chaotic plate pendulum	72
8.4.4	Optional: Second time-derivative of a vector in a reference frame	72
8.5	Optional: Angular velocity proofs	72
8.5.1	Proof of existence and uniqueness of the defining property of angular velocity	72
8.5.2	Proof of the new formula for angular velocity	73
8.5.3	Proof of angular velocity and orthogonal basis vectors	74
8.5.4	Proof of simple angular velocity	74
8.5.5	Proof of angular velocity addition theorem	75
8.5.6	Proof of angular velocity negative property	75
8.5.7	Proof of 2^{nd} time-derivative of any vector	75
9	Angular velocity and kinematical ODEs	77
9.1	Angular velocity and $\theta\hat{\lambda}$ rotations	77
9.1.1	Simple angular velocity – a special case	77
9.1.2	Optional: Differential equations for θ and $\hat{\lambda}$ in terms of angular velocity	77
9.2	Euler vector/parameters (quaternions) and angular velocity	78
9.2.1	Constraints associated with Euler parameters	78
9.2.2	Optional: Angular acceleration and Euler vector/parameters	79
9.2.3	Optional: Euler parameters and small, slow rotations	79
9.3	Optional: Rodrigues vector/parameters and angular velocity	79
9.4	Rotation matrices and angular velocity	80
9.4.1	Angular velocity matrix in terms of time-derivative of a rotation matrix	80
9.4.2	ODE for rotation matrix in terms of angular velocity (Poisson’s ODEs)	81
9.4.3	Optional: Angular acceleration in terms of 2^{nd} -derivative of rotation matrix	81
9.4.4	Optional: 2^{nd} -order ODE for rotation matrix in terms of angular acceleration	81
9.5	Example: Euler angles, angular velocity, and kinematical ODEs	82
9.6	Optional: Proofs	83
9.6.1	Proof of angular velocity in terms of θ and $\hat{\lambda}$	83
9.6.2	Proof of differential equations relating θ and $\hat{\lambda}$ to angular velocity	84
9.6.3	Proof of differential equations relating Euler parameters to angular velocity	84
9.6.4	Proof of angular velocity in terms of Euler parameters	85
9.6.5	Proof of angular acceleration in terms of Euler parameters	85

9.6.6	Proof of 2^{nd} -order ODEs relating Euler parameters to angular acceleration	85
9.6.7	Proof of ODEs relating Rodrigues parameters to angular velocity	86
9.6.8	Proof of angular velocity in terms of Rodrigues parameters	86
9.6.9	Proof of ODE for angular velocity in terms of 2^{nd} -derivative of rotation matrix	86
10	Points: Velocity and acceleration	87
10.1	Definition of a point's velocity and acceleration	88
10.2	Velocity and acceleration of two points <u>fixed</u> on a rigid body	90
10.3	Velocity and acceleration of a point <u>moving</u> on a rigid body	91
10.4	Velocity and acceleration of a point using another point	92
10.5	Relative velocity and relative acceleration of a point	93
10.6	Elongation and elongation-rate	93
10.7	Relationship between distance, position, velocity, and acceleration	94
10.7.1	Constant acceleration in a reference frame N – a special case	94
10.7.2	Constant acceleration along a curve (also see Section 10.8)	94
10.7.3	Circular motion	94
10.7.4	Analogy between translational motion and 2D rotational motion	94
10.7.5	Example: Free-fall of a sky-diver with constant downward acceleration	95
10.8	Speed and distance-traveled in a reference frame (see Hw 9.4, 9.7, 11.9)	95
10.9	Optional: Definition of jerk (snap, crackle, pop)	96
10.10	Optional: Acceleration vocabulary	96
10.11	Velocity and acceleration proofs	97
10.11.1	Proof of equivalence of the two relative velocity definitions	98
10.11.2	Proof of irrelevance of reference frame for relative velocity of coincident points	98
10.11.3	Proof of minimum velocity magnitude/location and instant center	99
11	Constraints: Rods, rolling, gears, . . .	101
11.1	Number of degrees of freedom	102
11.2	Rods, ropes, and separators (example in Section 11.14)	102
11.3	Linear actuator	102
11.4	Ball and socket joint	102
11.5	Revolute joint (also called a hinge or pin joint)	103
11.6	Revolute motor (revolute joint with additional angular constraint)	103
11.7	Cylindrical joint (revolute joint on straight slot)	103
11.8	Ball and socket in slot	103
11.9	Prismatic joint (also called a slider joint or square-slot joint)	104
11.10	Universal joint (Hooke's joint)	104
11.11	Contact (an intermittent inequality constraint)	104
11.12	Sliding, rolling, and pure rolling (contact)	105
11.12.1	Example: Velocity, sliding, rolling, and two points fixed on a rigid object	105
11.12.2	Example: Acceleration, sliding, rolling, and two points fixed on a rigid object	105
11.12.3	Example: Rolling motions of a cylinder inside a cylinder	106
11.13	Gears and constraint equations	107
11.14	Constraints associated with cables supporting a platform	109
11.15	Optional: Constraint stabilization	110
12	Particles (points with mass)	111
12.1	System of particles	112
12.2	Translational (linear) momentum for particles	112
12.3	Angular momentum and shift theorem for particles	113
12.4	Kinetic energy for particles	114
12.5	Effective force of a particle	115

12.5.1	Effective force of a system of particles	115
12.5.2	Effective force and translational momentum	115
12.6	Moment of effective force of a particle	115
12.6.1	Moment of effective force of a system of particles	115
12.6.2	Shift theorem for moment of an effective force	116
12.6.3	Moment of effective force and angular momentum	116
12.7	Parallels between momentum and effective force	116
12.8	Infant on a swing: Momentum, effective force, and energy	117
12.9	Forming and solving $\vec{F} = m\vec{a}$ for translational motion	118
12.10	Example: Velocity, acceleration, and $\vec{F} = m\vec{a}$	119
12.11	Optional: Proofs for momentum and effective force	120
12.11.1	Proof of translational momentum of a system of particles	120
12.11.2	Proof of effective force and its relationship to translational momentum	120
12.11.3	Proof of shift theorem for angular momentum	121
12.12	Optional: A different definition of angular momentum	121
13	Mass, center of mass, centroid	123
13.1	Mass	123
13.2	Center of mass and centroid	123
13.3	Figures and their length, area, and volume	125
13.4	Integrals for mass, center of mass, and centroid	125
13.5	Experiments, tables, CAD/CAE, and medical scanning	126
13.6	Optional: Measuring mass	126
13.7	Optional: The language and etymology of “mass”	127
13.8	Optional: What is mass?	127
13.9	Optional: Mass, energy, and physics	127
14	Concepts: Moments/products of inertia	129
14.1	Moment of inertia (also see Section 16.3)	129
14.1.1	Example: Moments of inertia of a particle	130
14.1.2	Conceptual example of moments of inertia	130
14.1.3	Demonstration: Effect of moment of inertia on a rolling cylinder	130
14.1.4	Demonstration: Effect of moment of inertia on a spinning book	130
14.1.5	Shift theorem for moment of inertia (parallel axis theorem)	131
14.2	Products of inertia (also see Section 16.4)	131
14.2.1	Example: Products of inertia of a particle	132
14.2.2	Conceptual example of products of inertia (also see Homework 12.6)	132
14.2.3	Demo: Effect of product of inertia on a rattleback (wobblestone)	132
14.2.4	Shift theorem for product of inertia	132
14.2.5	Differences in opinion about product of inertia	133
14.3	Optional: Radius of gyration and moment of inertia	134
14.3.1	Concept: Radius of gyration as matter concentrated in a thin-ring	134
14.3.2	Concept: Radius of gyration as a single particle	134
14.3.3	Context: Uses for radius of gyration	134
14.3.4	Calculation: Shift theorem for radius of gyration (parallel axis theorem)	134
15	Dyadics	135
15.1	Dyadic properties (vector * vector, dot-products, zero and unit dyadics, derivative)	136
15.2	Expressing a dyadic in terms of basis $\vec{a}_1, \vec{a}_2, \vec{a}_3$	137
15.3	Derivative of a dyadic in a rigid basis (or a reference frame)	137
15.4	Dyadics and matrices	138
15.5	Dyadic symmetry	138

15.6	Dyadic principal directions, eigenvalues, and eigenvectors	139
15.7	Optional: Dyadic inverse and positive-definite	139
15.8	Optional: Proof of unit dyadic expressed in orthogonal basis	139
16	Inertia dyadics	141
16.1	Inertia dyadic: A “suitcase” for moments and products of inertia	141
16.1.1	Inertia dyadic for a particle or system	141
16.1.2	Inertia dyadics for continuous systems	141
16.1.3	Shift theorem for an inertia dyadic (for an arbitrary system S)	142
16.1.4	Example: Inertia dyadic of a particle (also see example in Section 16.6)	142
16.2	Inertia scalars in terms of an inertia dyadic	142
16.3	Moments of inertia and inertia dyadics (also see Section 14.1)	143
16.4	Products of inertia and inertia dyadics (also see Section 14.2)	143
16.5	Inertia matrix (a symmetric matrix)	144
16.6	Example: Inertia properties for an infant on a swing	145
16.7	Example: Mass properties of three particles on a parallelepiped	145
16.8	Optional: Axis-symmetric and triaxially-symmetric inertia	146
16.9	Motivating concepts for inertia dyadics	147
16.10	Inertia vector	148
16.11	Principal inertia directions – an eigen-problem	148
16.12	Optional: Proof of inertia dyadic shift theorem	149
16.13	Optional: Summations and the inertia dyadic	149
16.14	Nonnegative sums and moment of inertia inequalities	150
16.15	Proof of product of inertia inequalities	150
17	Rigid bodies	151
17.1	What is a rigid body? (see examples in Hw 14)	151
17.2	Angular momentum of a rigid body B about a point <u>fixed</u> on B	152
17.2.1	Angular momentum for a rigid body with simple angular velocity (2D)	152
17.2.2	Reminder: Shift theorem for angular momentum of a rigid or flexible body B	152
17.2.3	Conservation of angular momentum for an axis-symmetric rigid body	153
17.3	Effective force of a rigid or flexible body	153
17.4	Moment of effective force of a rigid body	153
17.5	Kinetic energy of a rigid body	154
17.5.1	Kinetic energy special case: When point B_p is B_{cm}	154
17.5.2	Kinetic energy of a rigid body with simple angular velocity (2D)	155
17.6	Examples with an airplane (simple model)	155
17.6.1	Translational momentum and angular momentum of an airplane in N	155
17.6.2	Effective force and moment of effective force of an airplane in N	155
17.6.3	Kinetic energy of an airplane (B 's kinetic energy in N)	156
17.7	Optional: Proof of angular momentum for a rigid body B	156
17.8	Optional: Proof of moment of effective force for a rigid body	157
17.9	Optional: Proof of kinetic energy for a rigid body	159
17.10	Optional: Proof of conservation of angular momentum for an axis-symmetric rigid body	160
18	Force and resultant	161
18.1	Force and the law of action/reaction	161
18.2	Statics, dynamics, and resultant forces	162
18.3	Resultant of a set of vectors (e.g., forces on a point, body, or system)	162
18.4	Resultant force on a system (internal force cancellation)	162
18.5	Force and effective force – two types of forces in $\bar{\mathbf{F}} = m\bar{\mathbf{a}}$	163
18.6	Contact and distance forces	163

18.7	Applied and constraint forces	163
18.8	Optional: Conditions for force to exist (section under ongoing discussion)	163
18.9	Optional: The definition and philosophy of force	164
18.10	Optional: Force, mass, gravity, space, time, reference frames	164
18.11	Optional: Physicist's fundamental forces	165
19	Moments and torque	167
19.1	Moment of a vector	167
19.1.1	Moment of a set of vectors	167
19.1.2	Shift theorem for the moment of a set of vectors	167
19.1.3	$\hat{\mathbf{u}} \cdot \vec{\mathbf{M}}^{S/P} = \hat{\mathbf{u}} \cdot \vec{\mathbf{M}}^{S/O}$ if $\hat{\mathbf{u}}$ is parallel to line \overline{OP} (useful for MG road-maps in Section 22.6)	168
19.1.4	Moment arm of a vector about a point (example at end of Section 19.6)	168
19.2	Moment of internal forces	168
19.3	Statics, dynamics, and moments of forces	168
19.4	Definition of static equilibrium	169
19.5	Torque of a set of vectors (moment of a couple)	169
19.6	Neuromuscular biomechanics example: Muscle tension for curling	170
19.7	Optional: Proof of shift theorem for moment of a set of vectors	172
19.8	Optional: Minimum moment magnitude and central axis (wrench)	172
20	Replacement of forces and bound vectors	173
20.1	Replacement of distance forces (not a unique process)	173
20.2	Replacement of contact forces	174
20.3	Equivalence, replacement, and flexible bodies	174
20.4	Replacement of forces associated with constraints	175
20.5	Optional: Proof of action/reaction for contact forces	176
21	Encyclopedia of applied force and torque	177
21.1	Weight, mass, and gravity	177
21.2	Uniform gravity on a particle or body (see appendix for g for planets)	177
21.3	Universal gravitational attraction between two particles	178
21.4	Electrostatic forces and Coulomb's law for charged particles	179
21.5	DC (direct current) permanent magnet motors	179
21.6	Kinetic friction and the Continuous Friction Law	180
21.7	Translational spring between two points	181
21.8	Rotational (torsional) spring	181
21.9	Translational damper between two points	182
21.10	Rotational (torsional) damper	182
21.11	Light linear springs and dampers in <i>series</i>	183
21.12	Light linear springs and dampers in <i>parallel</i>	183
21.13	Viscous damper between two surfaces	184
21.14	Fluid forces (lift and drag)	184
21.14.1	Demo: Experimental determination of drag forces on a coffee filter	185
21.14.2	Closed-form solutions with aerodynamic drag	185
21.15	Aerodynamic forces on a baseball - a case study in philosophy	186
21.15.1	Drag force on a baseball having magnitude $b\vec{\mathbf{v}}_{\text{rel}}^2$	186
21.15.2	Lift (Magnus) force on a baseball	187
21.15.3	Aerodynamic torque on a baseball	188
21.15.4	Differences in aerodynamic models	188
21.16	Optional: Gravitational attraction between a particle and a body	189
21.17	Optional: Gravitational attraction between two bodies	190
21.18	Optional: Center of gravity	191

21.19	Optional: Proofs for spring and gravity forces	192
21.19.1	Optional: Proof of light linear springs and dampers in <i>series</i>	192
21.19.2	Optional: Proof of light linear springs and dampers in <i>parallel</i>	192
21.19.3	Optional: Proof for uniform gravity on a body or set of particles	192
22	Dynamics: Laws of motion	193
22.1	Newton’s law of motion for a particle	194
22.2	Newton’s equation for a system	194
22.3	Translational momentum principle	194
22.4	Angular momentum principle	194
22.5	Euler’s equations for a rigid body (3D)	195
22.6	MG road-maps for efficient statics and dynamics	196
22.6.1	MG road-map: Projectile motion (2D)	197
22.6.2	MG road-map: Rigid body pendulum (2D)	197
22.6.3	MG road-map: Inverted pendulum on cart (x and θ) (2D)	197
22.6.4	MG road-map: Rotating rigid body (3D)	198
22.6.5	MG road-map: Bridge crane equations of motion (2D)	198
22.6.6	MG road-map: Particle on spinning slot (2D)	198
22.6.7	MG road-map: Motion of a chaotic double pendulum (3D)	199
22.6.8	MG road-map: Particle pendulum (2D) – angle and tension	199
22.7	Impulse/momentum	200
22.8	Conservation of momentum	200
22.9	Optional: Proof: Translational momentum principle ($\vec{\mathbf{F}}^S = m^S * {}^N\vec{\mathbf{a}}^{S_{cm}}$)	201
22.10	Proof: Angular momentum principle, Euler’s rigid body equation	201
23	Power and work	205
23.1	Power/energy-rate principle (for any system S in a Newtonian frame N).	205
23.1.1	Rotational power/energy-rate principle for a rigid body	206
23.1.2	Translational power/energy-rate principle	207
23.2	Power of a force, set of forces, or torque on a rigid body	207
23.3	Forces that do not contribute to power (workless forces)	208
23.4	Power/energy-rate to size a torque-motor	208
23.5	Power/energy-rate for a commercial spring scale	209
23.6	Definition of work with an integral or differential equation	210
23.7	Work/energy principle	210
23.8	Optional: Proofs with power	211
23.8.1	Optional: Proof of the power/energy-rate principle	211
23.8.2	Optional: Proof of the rotational power/energy-rate principle	211
23.8.3	Optional: Proof of the translational power/energy-rate principle	212
23.8.4	Optional: Proof for power of a set of forces (or <u>torque</u>) on a rigid body B	212
24	Potential energy	213
24.1	Work/Energy principle	213
24.2	Conservation of mechanical energy (special case of work/energy)	213
24.3	Potential energy - a special type of work for “conservative” forces	214
24.3.1	Potential energy for a constant force or a uniform gravitational field	214
24.3.2	Potential energy for central forces (e.g., springs and inverse-square-law gravity)	215
24.3.3	Potential energy for a simple rotational spring	215
24.4	Force and gradient of potential energy	216
24.5	Optional: Proofs of potential energy	216
24.5.1	Optional: Proof of potential energy for a constant force in reference frame N	216
24.5.2	Optional: Proof of potential energy for a central force	216

24.5.3	Optional: Proof of applied force as negative gradient of potential energy	217
25	Kane's method	219
25.1	Kane's equation of motion (dynamics)	219
25.1.1	Examples of Kane's method (also see examples in Hw 20, 21)	219
25.1.2	Comparison of the methods of Kane and Lagrange (also see Section 27.8)	219
25.2	Generalized speeds and partial velocities (for Kane's method)	220
25.3	Kane's method (with proof)	221
25.4	Generalized force - useful for Lagrange and Kane's equations	222
25.4.1	Generalized force for a force, set of forces, or torque on a rigid body	222
25.4.2	Generalized forces, potential energy, and static equilibrium	223
25.4.3	Non-contributing forces (forces that do not contribute to generalized force)	223
25.4.4	Example: Generalized force for a commercial spring scale	223
25.4.5	Examples of generalized forces – also see guided problems in Hw 20, 21	223
25.5	Generalized effective force of a particle (handling $m\vec{a}$)	224
25.5.1	Example of generalized effective force of a particle (refers to example in Section 12.8)	224
25.5.2	Generalized effective force of a system of particles (handling $m\vec{a}$)	224
25.6	Generalized effective force of a rigid body (handling $m\vec{a}$ and $I\vec{\alpha}$)	224
25.6.1	Optional: Generalized effective force's relationship to kinetic energy	225
25.6.2	Optional: Efficiency of generalized effective force vs. kinetic energy	225
25.7	Optional: Generalized momentum of a particle and rigid body	226
25.7.1	Generalized momentum of a system of particles	226
25.7.2	Generalized momentum and kinetic energy for a system	226
25.7.3	Example of generalized momentum of a particle	226
25.7.4	Generalized momentum of a rigid body	226
25.8	Optional: Proof of generalized effective force for a rigid body	227
25.8.1	Optional: Proof of generalized forces from potential energy	228
26	Lagrange's equation of motion	229
26.1	Lagrange's equations of the first and second kind	229
26.1.1	Lagrange's equations - a mathematical process	229
26.1.2	Examples of Lagrange's method (also see examples in Hw 20 ,21)	229
26.1.3	Optional: Lagrange multipliers λ	229
26.2	Optional: Proof of Lagrange's equations of motion	230
26.3	Optional: Virtual work	232
26.3.1	Virtual work for a force or set of forces	232
26.3.2	Virtual work of a set of forces (or torque) on a rigid body	232
26.3.3	Virtual work and generalized force	232
26.3.4	Virtual work and static equilibrium	232
26.4	Optional: Virtual displacements/angular displacements	233
26.5	Optional: Inefficiencies in Lagrange's equations	233
26.6	Optional: Interchange property of partial/ordinary derivatives	234
27	Force and motion scalars: Generalized coordinates/speeds, . . .	235
27.1	Force and impulse scalars - pushes and pulls	235
27.2	State and state variables	235
27.3	Position scalars and generalized coordinates	235
27.4	Velocity scalars and generalized speeds (also see Section 27.8)	236
27.5	Kinematical differential equations (ODEs)	236
27.6	Velocity written in terms of velocity scalars (unconstrained)	237
27.6.1	Velocity scalars, motion constraints, and degrees of freedom	237
27.6.2	Optional: Motion constraints and independent/dependent velocity scalars	237

27.6.3	Optional: Velocity written in terms of velocity scalars (with constraints)	238
27.7	Research topic: Acceleration scalars	238
27.8	Optional: Guidelines for choosing efficient velocity scalars	239
28	MIPSI: Classic particle pendulum	243
28.1	Modeling the classic particle pendulum	243
28.2	Identifiers for the classic particle pendulum	244
28.3	Physics: Equations of motion of the classic particle pendulum	244
28.3.1	$\vec{F} = m\vec{a}$ for the classic particle pendulum	245
28.3.2	Angular momentum principle for the classic particle pendulum	246
28.3.3	Euler's rigid body equation for the classic particle pendulum	246
28.3.4	Kinetic energy for the classic particle pendulum	246
28.3.5	Power/energy-rate principle for the classic particle pendulum	247
28.3.6	Conservation of mechanical energy for the classic particle pendulum	247
28.3.7	Kane's method for the classic particle pendulum	248
28.3.8	Lagrange's method for the classic particle pendulum	248
28.4	Solution of the classic particle pendulum ODE	248
28.4.1	Numerical solution of pendulum ODE via MotionGenesis and/or MATLAB [®]	248
28.4.2	Analytical (closed-form) solution of the classic particle pendulum ODE	249
28.4.3	Simplification and analytical solution of the classic particle pendulum ODE	249
28.5	Interpretation of results for the classic particle pendulum	249
29	Example: Inverted pendulum on cart	251
29.1	Kinematics (space and time)	251
29.2	Rotation matrix	252
29.3	Angular velocity (special 2D case)	252
29.4	Angular acceleration	252
29.5	Position vectors (inspection and vector addition)	252
29.6	Velocity and acceleration	253
29.7	Forces, moments, and free-body diagrams (2D)	253
29.8	Mass, center of mass, inertia (required by dynamics)	254
29.9	Newton/Euler laws of motion for <i>A</i> and <i>B</i> separately (inefficient)	254
29.9.1	Dynamics for a rigid body with a simple angular velocity (special 2D case)	254
29.9.2	Optional: Angular momentum principle (2D alternative to Section 29.9.1)	254
29.9.3	Optional: Angular momentum principle (3D alternative to Section 29.9.1)	255
29.10	Equations of motion via MG road-maps/D'Alembert (efficient)	255
29.11	Generalized forces for Lagrange/Kane's equations of motion	256
29.12	Lagrange's equations of motion (described in Chapter 26)	256
29.13	Kane's equations of motion (described in Chapter 25)	257
29.14	Matrix form of equations of motion (for solution, controls, ...)	257
30	Solving for forces and motion. Forward, inverse, and mixed dynamics.	259
30.1	Matrix form of equations of motion	259
30.1.1	Inverse dynamics: Calculating knee joint torque	260
30.1.2	Inverse dynamics: Calculating hip and knee joint torque	260
30.2	Solving for forces and motion with operational tasks	261
30.2.1	Inverse dynamics: Calculating forces from specified end-effector motion	261
30.2.2	Inverse dynamics with operational task: Hip and knee joint torques	262

31 Feed-forward control	263
31.1 Feed-forward control for directly controlling Q or U	264
31.1.1 Example: Feed-forward control of a rocket sled's <u>velocity</u>	264
31.1.2 Example: Feed-forward control of rocket sled's <u>position</u>	265
31.1.3 Example: Feed-forward control with additional actuator	266
31.2 Feed-forward control with operational tasks	267
31.3 Optional: k_p , k_d , and analytical solutions of second-order ODEs	268
31.4 Derivation/insights into the mathematics of feed-forward control	269
32 Flexible Bodies (Overview)	271
32.1 Three points associated with flexible-body motion	271
32.2 References for Banerjee's flexible-body theory	271
Appendix: Mass and geometry properties of common objects	273
Appendices and index	273
Appendix of constants	278
Rotation tables and the angle θ	279
Rotation tables and angles θ_1 and θ_2	280
Rotation tables and angles $\theta_1, \theta_2, \theta_3$	282
Summary of equations	286
Bibliography	291
Homework	295
Homework 1: Vectors (basis independent)	297
Homework 2: Vector addition and dot/cross-products (with basis)	303
Homework 3: Optional: Position vectors and geometry	311
Homework 4: Vector bases and rotation matrices I	319
Homework 5: Vector differentiation	329
Homework 6: Angular velocity and angular acceleration	339
Homework 7: Optional: Vector bases and rotation matrices II	351
Homework 8: Velocity and acceleration I	359
Homework 9: Optional: Velocity and acceleration II	373
Homework 10: Constraints	383
Homework 11: Particle mass, translational/angular momentum, kinetic energy, etc.	407
Homework 12: Moments and products of inertia, dynamic Celt (rattleback)	425
Homework 13: Optional: Inertia dyadics	437
Homework 14: Rigid bodies translational/angular momentum, kinetic energy, etc.	445
Homework 15: Optional: Forces, force models, and statics	459
Homework 16: Optional: Moments and static equilibrium	465
Homework 17: $\vec{F} = m\vec{a}$ and FBDs for translating mechanical systems	479
Homework 18: $\vec{M} = \frac{d\vec{H}}{dt}$ and FBDs for rotating rigid bodies	485
Homework 19: Optional: Power, work, and potential energy	497
Homework 20: Kane/Lagrange dynamics (unconstrained)	507
Homework 21: Kane/Lagrange dynamics (with constraints)	517
Homework 22: Optional: Dynamics with control	533
Homework 23: Optional: MIPS simulation project	535
