

# Contents

<b>1</b>	<b>What is a dynamic system?</b>	<b>1</b>
1.1	Important concepts in dynamic systems . . . . .	1
1.2	High-level objectives of this textbook . . . . .	2
1.3	Skills taught in this textbook . . . . .	2
1.4	MIPSI: A procedure for studying dynamic systems . . . . .	2
<b>2</b>	<b>Math tools</b>	<b>3</b>
2.1	Why math is important . . . . .	3
2.2	Unit systems - SI and USA . . . . .	3
2.3	Mathematical operations . . . . .	4
2.3.1	Order of operations: Established mathematical convention? . . . . .	5
2.3.2	Patterns in mathematics . . . . .	5
2.4	Geometry: Ancient Euclid and modern vectors . . . . .	6
2.5	Circles and their properties . . . . .	6
2.6	Triangles and ratios of their sides (sine, cosine, tangent) . . . . .	6
2.6.1	Unit circle concept of sine and cosine . . . . .	6
2.6.2	Formulas involving sine and cosine . . . . .	7
2.6.3	Sine and cosine as functions (Euler, circa 1730) . . . . .	7
2.6.4	The amplitude-phase formulas for sine and cosine . . . . .	8
2.6.5	The function <code>atan2(y, x)</code> . . . . .	8
2.6.6	Optional: The sinc function . . . . .	8
2.7	Types of scalars: Variable, specified, constant . . . . .	8
2.8	Differentiation . . . . .	9
2.8.1	Definition of an ordinary derivative of a scalar function . . . . .	9
2.8.2	Definition of a partial derivative of a scalar function . . . . .	9
2.8.3	Definition of the differential of an independent variable and scalar function . . . . .	9
2.8.4	Short table of derivatives frequently encountered in engineering . . . . .	10
2.8.5	Good product rule for differentiation (for scalars, $\vec{v}$ ectors, matrices, . . .) . . . . .	10
2.8.6	Quotient rule for derivatives (or remember $\frac{u}{v} = u v^{-1}$ and use exponent and product rules) . . . . .	10
2.8.7	Chain rule for ordinary derivatives . . . . .	10
2.8.8	Example: Partial and ordinary differentiation . . . . .	10
2.8.9	Implicit differentiation: A useful tool for calculating derivatives . . . . .	11
2.9	Integration and a short table of integrals . . . . .	11
2.10	Solutions of <i>polynomial</i> equations (roots) quadratic equation . . . . .	11
2.11	Solutions of linear and nonlinear algebraic equations . . . . .	12
2.12	Solving ODEs (ordinary differential equations) . . . . .	12
2.13	Computer solutions of algebraic and differential equations . . . . .	13
2.14	Optional: Continuous solutions of <i>nonlinear</i> algebraic equations . . . . .	13
2.15	Optional: Proofs of various trigonometric formulas . . . . .	14
2.15.1	Proof of the addition formula for the sine function . . . . .	14

2.15.2	Geometrical proof of eqn (11), the amplitude-phase trigonometric identity . . . . .	14
2.15.3	Trigonometric proof of eqn (11), the amplitude-phase trigonometric identity . . . . .	14
<b>3</b>	<b>Introduction to differential equations</b>	<b>15</b>
3.1	Motivating example: Chaotic plate pendulum . . . . .	15
3.2	Why we care about differential equations . . . . .	16
3.3	Classification of differential equations . . . . .	16
3.4	Independent, dependent, and specified variables . . . . .	16
3.5	Classification of algebraic and differential equations . . . . .	17
3.6	Example of classification of differential equations . . . . .	19
3.7	What is a vibration? . . . . .	19
3.8	Solution techniques for ordinary differential equations (ODEs) . . . . .	20
3.9	Optional: Numerical solution of ODEs - concepts . . . . .	20
	Optional: Analytical solution methods for ODEs . . . . .	21
<b>4</b>	<b>Separation of variables &amp; 1<sup>st</sup>-order ODEs</b>	<b>23</b>
4.1	Separation of variables and integration . . . . .	23
4.1.1	Finding a value for the undetermined constant $C$ . . . . .	23
4.1.2	Example: Olympic swimming via separation of variables . . . . .	24
4.2	Time constant . . . . .	24
4.3	Assumed solution $y(t) = C e^{pt}$ for homogeneous, 1 <sup>st</sup> -order, ODEs . . . . .	25
4.3.1	Example: Olympic swimming via assumed solution . . . . .	26
4.3.2	Example: An ODE for the biology of life . . . . .	26
4.4	Optional: The origins of $e$ . . . . .	27
4.4.1	Optional: An amazing property of the exponential function $e^t$ . . . . .	27
4.4.2	Optional: Mathematical connections with $e$ . . . . .	28
4.4.3	Optional: $e$ is for Euler, $e$ is for engineer, $e$ is for excellent . . . . .	28
<b>5</b>	<b>Second-order, homogeneous, ODEs</b>	<b>29</b>
5.1	Analytical techniques for solving ODEs (see examples in Hw 3) . . . . .	29
5.2	Analytical solutions of homogeneous, second-order, ODEs . . . . .	29
5.3	Euler's formula: $e^{i\theta} = \cos(\theta) + i \sin(\theta)$ – memorize! . . . . .	30
5.4	Example: <i>Undamped</i> , homogeneous, second-order, ODE . . . . .	31
5.5	Mathematical and physical significance of $\zeta$ , $\omega_n$ , and $\omega_d$ . . . . .	31
5.6	Example: Bungee jumping . . . . .	32
5.7	Solution process for linear, 2 <sup>nd</sup> -order, ODEs . . . . .	33
5.7.1	Solution process for linear, $n^{\text{th}}$ -order, constant-coefficient ODEs . . . . .	33
5.7.2	Derivation of solution for <i>undamped</i> 2 <sup>nd</sup> -order ODE . . . . .	33
5.7.3	Optional: Derivation of solution for <i>critically-damped</i> ODE . . . . .	34
<b>6</b>	<b>Time specifications for 2<sup>nd</sup>-order ODEs</b>	<b>35</b>
6.1	Period of vibration . . . . .	35
6.2	Step response and time-specifications . . . . .	36
6.3	Decay ratio and logarithmic decrement . . . . .	37
6.4	Rise time . . . . .	37
6.5	Peak time and maximum overshoot . . . . .	38
6.6	Settling ratio and settling time . . . . .	38
6.7	Example: Laboratory data and time specifications . . . . .	39

<b>7</b>	<b>Roots, root locus, and <math>e^{pt}</math></b>	<b>41</b>
7.1	Properties of $e^{pt}$ ( $p$ is a constant and $t$ is time)	41
7.2	Roots of polynomials and the Fundamental Theorem of Algebra	43
7.3	Roots of polynomials, independent functions, and stability of ODEs	43
7.4	Necessary condition for a polynomial to have negative roots	43
7.5	What is a root locus?	45
7.6	Why use a root locus?	45
7.7	Root locus for $2^{nd}$ -order ODE (for $m$ or $b$ or $k$ )	45
7.8	$2^{nd}$ -order ODEs: $\omega_n, \zeta$ in terms of poles $p_1, p_2$	48
7.9	Roots of a $5^{th}$ -order polynomial with MATLAB <sup>®</sup> or MotionGenesis	49
7.10	Optional: Drawing a root locus with MATLAB <sup>®</sup>	50
<b>8</b>	<b>Equations of motion</b>	<b>51</b>
8.1	Newton's law of motion for a particle $\vec{F} = m\vec{a}$	51
8.2	Newton's equation for a system	51
8.3	Euler's equation for a rigid body (2D) $\vec{M}_z = I_{zz}\vec{\alpha} + \dots$	51
8.4	$\vec{F} = m\vec{a}$ recipe for translational motion	52
8.5	Example: $\vec{F} = m\vec{a}$ recipe for translational motion (particle in spinning slot)	53
	Summary of dynamics equations	54
<b>9</b>	<b>Power/kinetic energy-rate principle</b>	<b>55</b>
9.1	Why the power/kinetic energy-rate principle is such a useful tool.	55
9.2	Power of a force, set of forces, or torque on a rigid body	56
9.3	Forces that do not contribute to power (workless forces)	57
9.4	Power/kinetic energy-rate for a commercial spring scale	57
9.5	Optional: Kinetic energy	58
9.5.1	Kinetic energy of a particle	58
9.5.2	Kinetic energy of a rigid body with a simple angular velocity	58
<b>10</b>	<b>Example: Classic particle pendulum</b>	<b>59</b>
10.1	Modeling the classic particle pendulum	59
10.2	Identifiers for the classic particle pendulum	60
10.3	Physics: Equations of motion of the classic particle pendulum	60
10.3.1	$\vec{F} = m\vec{a}$ for the particle pendulum	61
10.3.2	Angular momentum principle for the particle pendulum	61
10.3.3	Euler's rigid body equation for the particle pendulum	62
10.3.4	Kinetic energy for the particle pendulum	62
10.3.5	Power/kinetic energy-rate principle for the particle pendulum	62
10.3.6	Conservation of mechanical energy for the particle pendulum	63
10.4	Solution of the classic particle pendulum ODE	63
10.4.1	Numerical solution of pendulum ODE via MotionGenesis and/or MATLAB <sup>®</sup>	63
10.4.2	Optional: Exact (closed-form) solution of the classic particle pendulum ODE	63
10.4.3	Simplification and analytical solution of the classic particle pendulum ODE	63
10.5	Interpretation of results for the classic particle pendulum	64
<b>11</b>	<b>Example: Inverted pendulum on cart</b>	<b>65</b>
11.1	Kinematics (space and time)	65
11.2	Rotation matrix	65
11.3	Angular velocity (special 2D case)	66
11.3.1	Simple angular velocity example: Step-by-step process to calculate ${}^N\vec{\omega}^B$	66
11.3.2	Angular velocity and vector differentiation (golden rule for vector differentiation)	66
11.4	Angular acceleration (time-derivative of angular velocity)	66

11.5	Position vectors (inspection and vector addition)	67
11.6	Velocity and acceleration	67
11.7	Forces, moments, and 2D free-body diagrams (FBD)	67
11.8	Mass, center of mass, inertia (required by dynamics)	68
11.9	Newton/Euler laws of motion for A and B separately (inefficient)	68
11.10	Dynamics of a rigid body with simple angular velocity (special 2D case)	68
11.11	Equations of motion via MG road-maps/D'Alembert (efficient)	68
11.12	Matrix form of nonlinear and linearized equations of motion	69
<b>12</b>	<b>Inhomogeneous ODEs</b>	<b>71</b>
12.1	Solution of an <i>inhomogeneous</i> 1 <sup>st</sup> -order ODE	72
12.2	Two techniques for finding a particular solution $y_p(t)$	72
12.3	Integral technique for particular solution to 1 <sup>st</sup> -order ODE	72
12.4	Table of assumed particular solutions (inhomogeneous ODEs)	72
12.5	Steady-state and transient parts of $y(t)$	73
12.6	Example: <i>Inhomogeneous</i> 1 <sup>st</sup> -order ODE	73
12.6.1	Homogeneous solution $v_h(t)$ (from Chapter 4)	74
12.6.2	Integral technique for particular solution $v_p(t)$	74
12.6.3	Assumed particular solution technique for $v_p(t)$ (use table in Section 12.4)	74
12.6.4	Steady-state and transient parts of $v(t)$	74
12.7	Solution of an <i>inhomogeneous</i> 2 <sup>nd</sup> -order ODE	75
12.8	Integral technique for particular solution to 2 <sup>nd</sup> -order ODE	75
12.9	Example: <i>Inhomogeneous</i> 2 <sup>nd</sup> -order ODE (vehicle suspension)	75
12.9.1	Integral technique for particular solution $y_p(t)$ [uses eqn (12)]	75
12.9.2	Assumed particular solution technique for $y_p(t)$ (use table in Section 12.4)	76
12.9.3	Steady-state and transient solutions of an undamped (neutrally stable) ODE	76
12.10	BIBO stability of homogeneous and inhomogeneous ODEs	76
12.11	Optional: Derivation of $y_p(t)$ for <i>inhomogeneous</i> 1 <sup>st</sup> -order ODE	77
<b>13</b>	<b>Harmonic forcing, steady-state response</b>	<b>79</b>
13.1	Steady-state response to harmonic forcing $\bar{A} \sin(\Omega t + \theta)$	79
13.2	Steady-state response to harmonic forcing $A \Omega^2 \sin(\Omega t + \theta)$ ( $\bar{A} = A \Omega^2$ )	80
13.3	Undamped ( $\zeta = 0$ ) vibration and harmonic-forcing $\bar{A} \sin(\Omega t + \theta)$	81
13.3.1	Resonance ( $\Omega = \omega_n$ ) and undamped harmonically-forced vibrations	81
13.3.2	The beat phenomenon ( $\Omega \approx \omega_n$ ) for undamped vibrations	81
13.4	Optional: Underdamped vibration and harmonic-forcing $\bar{A} \sin(\Omega t + \theta)$	82
13.5	Optional: Undamped ( $\zeta = 0$ ) vibration and harmonic-forcing	82
<b>14</b>	<b>Motors, sensors, and electrical circuits</b>	<b>83</b>
14.1	DC (direct current) permanent magnet motors	85
14.2	Electrical current $i$	85
14.3	Voltage $v$ and its units	85
14.4	Definitions of series and parallel electrical elements	86
14.5	Example: Motor circuit	86
<b>15</b>	<b>Complex numbers</b>	<b>91</b>
15.1	Definition of a complex number	91
15.2	Equivalent complex numbers	91
15.3	Complex conjugate	92
15.4	Complex number addition and subtraction	92
15.5	Complex number multiplied (or divided) by a real number	92
15.6	Multiplying two complex numbers	93

15.7	Exponentiation and complex numbers . . . . .	93
15.8	Complex number divided by a complex number . . . . .	93
15.9	Motivating the imaginary number $i$ . . . . .	94
15.10	Optional: Complex numbers and other mathematical functions . . . . .	94
<b>16</b>	<b>Laplace transforms</b>	<b>95</b>
16.1	What is time $t$ and the Laplace variable $s$ ? . . . . .	95
16.2	What is a Laplace transform? . . . . .	95
16.3	Why use a Laplace transform – connections to <u>linear</u> ODEs . . . . .	96
16.4	Complex functions and transfer functions . . . . .	97
16.5	Poles and zeros of a transfer function . . . . .	97
16.6	Process for creating a Bode plot (visualizing frequency response) . . . . .	97
16.7	Sinusoidal transfer function $G(s = j\omega)$ and harmonic forcing . . . . .	98
16.8	Thinking in $s$ and $t$ (also see Homework 10.1) . . . . .	99
16.9	Optional: Final value theorem . . . . .	99
16.10	Example: An RC circuit as a filter (output voltage) . . . . .	100
<b>17</b>	<b>PID control of dynamic systems</b>	<b>103</b>
17.1	What is a control system? (examples in Hw 4.11-12, Hw 7.6-7, Hw 13, Hw 14.1, Hw 17) . . . . .	103
17.2	<b>4</b> steps to control a system governed by a linear ODE . . . . .	103
17.3	Block diagrams and control system components . . . . .	104
17.4	What is PID control? . . . . .	104
17.5	Vehicle cruise control with <u>unknown</u> head-wind . . . . .	104
17.5.1	Step <b>4</b> . Open-loop control: $\tilde{F}_c = 0$ . . . . .	105
17.5.2	Alternative step <b>4</b> . Proportional (P) control: $\tilde{F}_c = -k_p \tilde{v}$ ( $k_p$ is a constant) . . . . .	105
17.5.3	Alternative step <b>4</b> . Proportional-Integral (PI) control . . . . .	105
17.5.4	Improving the model to improve the control (done in Hw 14.1) . . . . .	106
17.6	Feedback control of water level in a reservoir (hydraulics) . . . . .	106
17.6.1	Step <b>4</b> . Open-loop control: $\tilde{P} = 0$ . . . . .	107
17.6.2	Alternative step <b>4</b> . Proportional (P) control: $\tilde{P} = -k_p \tilde{h}$ ( $k_p$ is a constant) . . . . .	107
17.6.3	Alternative step <b>4</b> . Proportional-Integral (PI) control . . . . .	107
17.6.4	Compare open-loop, proportional (P), and proportional-integral (PI) controls . . . . .	108
<b>18</b>	<b>Linearization and small approximations</b>	<b>109</b>
18.1	Approximating products, powers, functions (examples in Hw 14) . . . . .	109
18.2	Example: Linearization of a particle sliding on a beam . . . . .	109
18.3	Why linearize? . . . . .	110
18.4	Simplification and solution of the classic particle pendulum . . . . .	110
18.5	Simplification and solution of the <i>inverted</i> particle pendulum . . . . .	111
18.6	Optional: Further investigation of small angle approximations . . . . .	112
<b>19</b>	<b>Optional: Linearization and Taylor series</b>	<b>113</b>
19.1	Taylor series expansion in a single variable . . . . .	113
19.2	Multi-variable Taylor series expansion . . . . .	113
19.3	Linearization of a function via Taylor series . . . . .	114
19.4	Linearization of ordinary differential equations via Taylor series . . . . .	114
19.5	Example of Taylor series in a single variable . . . . .	114
19.6	Example: Linearization and stability of particle pendulum ODE . . . . .	115
19.7	Example: Linearization of ODEs for a swinging spring . . . . .	116
19.8	Optional: Motivating/proving the Taylor series . . . . .	118

<b>20 Matrices and <math>AX = B</math></b>	<b>119</b>
20.1 Motivating question: Solving <u>one</u> linear algebraic equation . . . . .	119
20.2 Why use matrices – getting organized (like a spreadsheet or bookcase) . . . . .	119
20.3 What is a matrix? . . . . .	119
20.4 Row and column matrices . . . . .	120
20.5 Addition of matrices . . . . .	120
20.6 Multiplication of a matrix with a scalar . . . . .	120
20.7 Multiplication of matrices . . . . .	120
20.8 The zero matrix and the identity matrix . . . . .	120
20.9 Transpose of a matrix . . . . .	121
20.10 Submatrices of a matrix . . . . .	121
20.11 Determinant of a matrix, minors and cofactors . . . . .	121
20.12 Adjugate matrix (or classical adjoint matrix) . . . . .	122
20.13 Inverse of a matrix . . . . .	122
20.14 Changing linear algebraic equations into matrix form $AX = B$ . . . . .	123
20.15 Solving the matrix linear algebraic equation $AX = B$ . . . . .	123
20.16 Optional: Pseudo-inverse solutions to $AX = B$ . . . . .	123
20.17 Partial and ordinary derivative of a matrix . . . . .	124
20.18 Optional: Other matrices and their properties . . . . .	124
20.19 Optional: A history of matrices and determinants . . . . .	124
<b>21 Eigenvalues and eigenvectors</b>	<b>125</b>
21.1 Recognize and remember: Solving an eigenvalue problem . . . . .	125
21.2 Why does a determinant solve for eigenvalues? . . . . .	125
21.3 Motivating questions for eigenvalues and eigenvectors (Hw 15.9) . . . . .	126
21.4 Solving the standard algebraic eigenvalue problem . . . . .	127
21.4.1 Special eigenvalues for the $n \times n$ matrix $A$ . . . . .	127
21.4.2 Eigenvalues and the roots of a polynomial . . . . .	127
21.5 Situations when $\text{Matrix}(\lambda)$ is nonlinear in $\lambda$ . . . . .	128
21.6 Generalized eigenvalue problem . . . . .	129
<b>22 Coupled, linear, 1<sup>st</sup>-order ODEs</b>	<b>131</b>
22.1 Solutions of <i>coupled</i> , linear, constant-coefficient 1 <sup>st</sup> -order ODEs . . . . .	131
22.2 Molecular dynamics: RNA folding and <i>coupled</i> 1 <sup>st</sup> -order ODEs . . . . .	132
<b>23 Matrix form of <i>coupled</i>, 2<sup>nd</sup>-order, linear, ODEs</b>	<b>135</b>
23.1 Model, identifiers, and physics of a two rotor system . . . . .	135
23.2 Matrix form of <i>coupled</i> , linear, second-order, ODEs . . . . .	136
<b>24 Undamped coupled 2<sup>nd</sup>-order ODEs</b>	<b>137</b>
24.1 Physical insights into eigenvalues and eigenvectors of a slinky . . . . .	137
24.2 Solution of <i>undamped, coupled</i> ODEs . . . . .	138
24.3 <i>Undamped, coupled</i> , ODEs for two rotor system . . . . .	139
24.4 Relationship to standard algebraic eigenvalue problem . . . . .	141
24.5 Mode dance . . . . .	142
24.6 Optional: Vibrations, modal coordinates, modal damping . . . . .	143
<b>25 State-space and damped, coupled, ODEs</b>	<b>145</b>
25.1 Generalized eigenvalue solutions of <i>damped, coupled</i> , ODEs . . . . .	145
25.2 Alternative solution technique: State-space/standard eigen-equation . . . . .	146
25.3 <i>Damped, coupled</i> , ODEs for two rotor system . . . . .	147

<b>26 State-space and efficient feedback control</b>	<b>149</b>
Example: Balancing an inverted pendulum by hand . . . . .	149
26.1 State-space control (used to control many physical systems) . . . . .	149
26.2 State-space control of coupled $2^{nd}$ -order ODEs . . . . .	150
26.3 Efficient control for coupled $2^{nd}$ -order ODEs . . . . .	151
<b>27 Feed-forward control</b>	<b>153</b>
27.1 Feed-forward control . . . . .	153
27.1.1 Example: Feed-forward control of a rocket-sled's <u>velocity</u> . . . . .	154
27.1.2 Example: Feed-forward control of a rocket-sled's <u>position</u> . . . . .	155
27.1.3 Example: Feed-forward control with additional actuator (over-actuated) . . . . .	155
27.2 Derivation/insights into the mathematics of feed-forward control . . . . .	156
<b>Homework</b>	<b>159</b>
Homework 1: Geometry and calculus . . . . .	159
Homework 2: Uncoupled $1^{st}$ -order ODEs . . . . .	167
Homework 3: Uncoupled $2^{nd}$ -order ODEs (vibrations) . . . . .	179
Homework 4: Time specifications for ODEs and control . . . . .	187
Homework 5: $\vec{F} = m\vec{a}$ and ODEs for mechanical systems . . . . .	193
Homework 6: Inhomogeneous ODEs and harmonic forcing . . . . .	215
Homework 7: Root locus . . . . .	227
Homework 8: Complex numbers . . . . .	233
Homework 9: Forming equations for circuits and motors . . . . .	235
Homework 10: Circuits, Laplace transforms, frequency response . . . . .	239
Homework 11: <b>Optional:</b> Circuits, Laplace transforms, frequency response II . . . . .	243
Homework 12: PID control (simple) . . . . .	251
Homework 13: PID control (advanced) . . . . .	255
Homework 14: Linearizing ODEs for controls and stability analysis . . . . .	263
Homework 15: Matrix algebra . . . . .	271
Homework 16: Coupled ODEs, matrices, and PID control . . . . .	275
Homework 17: State-space, coupled ODEs, and PID control . . . . .	285
<b>Working Model simulations/labs (www.MotionGenesis.com <math>\Rightarrow</math> Textbooks <math>\Rightarrow</math> Resources)</b>	<b>1</b>
